STRONG, OPEN, INTERNATIONAL GROUP

The Jeremias Group has more than
40 years experience
in the flue and chimney production.

The headquarters are situated in Germany. The Jeremias Group has expanded its activities steadily in Europe being now the single stainless steel chimney manufacturer with

6 Production locations
in 5 different countries.

Besides production and own sales offices, Jeremias has strong cooperation partnerships with chimney specialist companies all over Europe.

Jeremias is one of the world`s leading manufacturers of flue and chimney systems for the exhaust of gases and ventilation, covering all kind of domestic, commercial and industrial applications. Jeremias product range include

60 different CE certified systems

covering commercial and domestic applications complemented by freestanding Industrial steel chimneys up to 3 meter diameter.

Jeremias offers its clients a wide range of high quality products, technical support for Projects, chimney sizing software, European CE Certification in a modern and dynamic company able to satisfy a wide variety of the flue market requirements needed in the market.

SERVICE

- > Flexible production line
- > Total flexibility for special parts (customization)
- > Design of project drawings
- > Chimney sizing
- > Test-capable chimney static calculations
- > Biggest product range in the market
- > Development for market-focused system solutions
- > Country specific certifications and installation advice

QUALITY

- > CNC Laser technology
- > CNC stamping technology
- > Modern 3D CAD software
- > Special stainless steel alloys
- > 3D laser cutting

INNOVATION

- > System development with Boiler, CHP and Stove manufacturers
- > Own specific machine development
- > Own Test laboratory for acoustic R&I silencer development

QUALITY AND RESOURCES

Manufactured in accordance with the EN 1856-1 (performance requirements for metal chimney systems) and under Quality Assurance EN ISO 9001:2000

Jeremias Products have achieved designations for all normal applications, in domestic, commercial and industrial projects.

Besides this compulsory CE Certification, Jeremias has also special certifications and listings needed in specific countries under i.e.; BS, Hetas, Swiss, Russian or US standards.

For further information, Jeremias can supply technical guidance on various standards including the latest version of the European Standard 1856-1:2010. Please contact our certification department.

TECHNICAL SUPPORT

- > Chimney sizing
- > Fire rating advice
- > Mechanically controlled ventilation calculation
- > Design and system recommendation
- > Structural design and test-capable chimney static calculations
- > Supply and install service (own installers, or via accredited specialists)
- > After sales service
- > Product Warranty

SYSTEM APPLICATIONS

CHIMNEY SYSTEMS

- > Heating and hot water
- > Chimney relining systems
- > Concentric balance flue systems
- > Shared collective chimney systems CLV
- > Plastic relining systems
- > Fan dilution / fan assisted systems
- > Freestanding Chimneys
- > Mast Supported Chimneys
- > Windshield Chimneys

EXHAUST SYSTEMS

- > Generator / turbine exhausts
- > Cogeneration / CHP
- > Incinerator exhausts
- > Industrial process exhausts
- > Engine exhausts
- > Dry oven exhaust
- > Kitchen exhausts
- > Micro-cogeneration

SMOKE EXTRACT SYSTEMS

- > Fire rated smoke ducts to BS 476 pt 20 (4 hours)
- > Fire rated ventilation ducts to UNE-EN 13501
- > Laundry / refuse chutes

VENTILATION

- > Free standing ventilation towers
- > Fire rated ventilation ducts
- > Mechanically controlled ventilation systems

DW ECO 2.0

PRODUCT DESCRIPTION

DW ECO 2.0 is a multi fuel, twin wall insulated stainless steel flue system suitable for all applications in negative and positive pressure, including condensing (joint seals).

Designed for use with all gas, oil, pellet, wood, coal domestic, commercial or industrial appliances.

MAIN FEATURES:

- > Simple open ended push-fit jointing system, secured by locking band.
- > 70 mm wide recessed locking band, aesthetically pleasing look.
- > 60 mm plugged in joint + wider locking band = better holding in horizontal runs.
- > Homogenous 25 mm high quality rigid rock wool insulation with 120 kg/cubic meter guaranteed density.
- > Continuous insulation: No thermal bridge between inner and outer steel case.
- > Low outer case temperature.
- > Operating temperature of 600° C - Soot fire tested at 1000° C.
- > Free expansion of the inner flue liner, assuring the integrity of the flue after a soot fire.
- > 4 hour fire rated to BS 476 part 20.
- > Jointing system with capillary break prevents moisture being drawn through the joint.
- > Positive pressure till 200 pa with the use of joint seals in the socket of the inner liner specially designed for modern condensing appliances.
- > 3 meters freestanding above last support.
- > Lateral support every 4 metres.
- > Load bearing support every 16 metres.
- > Full range of accessories

DW ECO 2.0

SYSTEM SPECIFICATION

AND CE DESIGNATIONS:

DW ECO 2.0 is CE Certified to EN 1856-1 TÜV 0036 CPD 9174 030 and TÜV 0036 CPD 9174 044. For full information and certificates please contact your Jeremias team.

The **DW ECO 2.0** has been designed to cover all kind of applications. Therefore the system has been tested in different scenarios to proof different combinations of temperature, pressure and corrosion resistance.

Manufactured under a Quality Management scheme approved to EN ISO 9001: 2008

Hetas listed for use on solid fuel applications 4 hour fire rating to BS476 part 20

Certified for corrosion resistance on gas, oil and solid fuel by TÜV.

DW ECO 2.0 is a multi fuel, twin wall insulated stainless steel flue system suitable for all applications in negative and positive pressure, including condensing (joint seals). Designed for use with all gas, oil, pellet, wood, coal domestic, commercial or industrial appliances. Maximum constant working temperature 600° C and short firing up to 700° C with thermal shock testing up to 1000° C.

DW ECO 2.0 is HETAS listed for use with all pellet, wood, and multi fuel domestic appliances (stoves and fire-places) maximum constant working temperature 450° C and short firing up to 550° C with thermal shock testing up to 1000° C.

EN 1856-1 T600 N1 D V3-L50040 G70

EN 1856-1 T450 N1 D V3-L50040 G60

DW ECO 2.0 is designed for use with all gas, oil, domestic, commercial or industrial appliances with natural draught in wet conditions with a maximum constant working temperature 400° C and short firing up to 450° C.

All the components of the **DW ECO 2.0** are water resistant and able to operate with the new generation of condensing gas, oil and solid fuel appliances by adding a joint seal in the inner liner of each component.

Designed for a continuous operating temperature up to 200° C, short firing up to 250° C and positive pressure up to 200 pa at the appliance outlet.

EN 1856-1 T400 N1 W V2-L50040 O30

EN 1856-1 T200 P1 W V2-L50040 O00

The system **DW ECO 2.0** can be supplied with alternative alloys in the inner liner. Please contact your Jeremias team for more information.

FLUE SIZE ADVICE

Jeremias provides **technical advice** for system application and size calculation. All the flue size calculations done by our technicians are in accordance with the requirements defined at the EN 13384-1 (single appliances) and EN 13384-2 (multi appliances) standards.

Jeremias provides the **necessary reports** for these calculations. Please take into account the flue height terminations depends on national, regional or even local authorities, therefore we recommend you to contact Jeremias at the specific country.

ONE SYSTEM MULTIPLE APPLICATIONS

The Jeremias group of companies has been present in the flue industry for more than 40 years, and now is the stainless steel flue systems manufacturer with the largest number of CE certified systems. The CE MARK is the symbol - obligatory since April 2005 - that certifies that a stainless steel chimney is in accordance with the EN 1856-1.

This standard specifies the performance requirements for rigid single and multi-wall system chimney products with metallic liners (chimney sections, chimneys fittings and terminals, including supports) used to convey the products of combustion from appliances to the outside atmosphere.

It also specifies the requirements for marking, manufacturer's instructions, product information and evaluation of conformity of the product to the standard. The EN 1856-1 introduces a requirement for a certified factory production control system, which is in addition to any existing ISO 9000 factory quality scheme. This ensures, through continuous assessment and external quality audits, that the manufactured product conforms with the performance designation of the product.

A simple code will give the user information about the suitability of the system for different applications.

CE Designation: EN 1856-1 T600 N1 V3-L50040 G70

TEMPERATURE CLASS

T80, 100, 120, 140, 160, 200, 250, 300, 400, 450, 600
This indicates the normal maximum operating temperature of the chimney.

PRESSURE CLASS

N1, N2, P1, P2, H1, H2

The pressure class relates to the product's suitability and gas tightness when used on positive pressure applications up to 200 pa (P), negative (N) draught applications, and high positive pressure (H) applications and is further classified as to the degree of leakage allowed with either a 1 or 2, with 1 having the lowest leakage rate.

Stoves and Fireplaces:

DW ECO 2.0 is an ideal solution for the installation of stoves and fireplaces. high quality at an economic price. Jeremias has developed market specific components and supports adapted to all kind of installation rules. DW ECO 2.0 is an HETAS listed product and 4 hour fire rated to BS 476 part 20.

Please respect local regulations regarding minimum distances to combustible materials, Jeremias can supply technical guidance on various standards and country specific installing regulations

CE Designation: T450 N1 V3-L50040 G60

CONDENSATE RESISTANCE CLASS

W=Wet, D=Dry

CORROSION RESISTANCE

V1, V2, V3, Vm

V1: Sulphur content <= 50 mg/m³, natural gas L+H Kerosene: Sulphur content <= 50 mg/m³.

V2: Natural gas L+H Oil: Sulphur content <= 0.2 mass % Kerosene: Sulphur content >= 50 mg/m³ Wood in open fireplaces.

V3: Natural gas L+H Oil: Sulphur content > 0.2 mass % Kerosene: Sulphur content >= 50 mg/m³ Wood in open fireplaces. Wood in closed stoves, Coal Peat

Vm: Self declared by the manufacturer as suitable for the application based on product history and historical performance in the field. The corrosion resistance class should be matched against the fuel type.

THE LINER SPECIFICATION

The liner specifications offer a number of material codes together with the lowest diameter liner thickness.

SOOT FIRE RESISTANCE

G [X] = with soot fire resistance

O [X] = without soot fire resistance

[X] = product declared minimum distance to combustible material in mm.

The CE Mark enables the product to circulate freely in the European market, being the highest standard for metal chimney systems in the world; nevertheless each country could have its own installation rules. Jeremias also has a wide range of specific certifications to enforce national, regional or even local regulations. No matter where the project will be installed Jeremias will provide the necessary certification to meet the local approvals procedure.

For any specific documentation needed during project specification please contact our technical department.

Biomass Boiler:

A typical application for the chimney system DW ECO 2.0 are biomass boilers. heating with biomass a CO₂ neutral alternative for individual houses, apartments or office buildings DW ECO 2.0 gives the solution for the smoke exhaust. DW ECO 2.0 is tested to 600° C continuous operating temperature and soot fire tested at 1000° C and has the highest corrosion resistance level V3.

Please note that frequent cleaning and maintenance of the chimney system (specially with solid fuel) will extend the lifetime of the product. Jeremias provides a 10 year warranty.
