

extract and supply...

pedigree

Since its inception in the early 1960's Nuaire has been at the forefront of the ventilation industry and is acknowledged for its expertise, commitment to innovation and the outstanding quality of its ventilation products and customer service.

Nuaire encompasses technologies at all levels to be able to offer the complete ventilation solution for the built environment. Nuaire has leading experts who are constantly setting new standards for the industry by developing new, innovative products in the company's research and development department – the largest and most advanced in the UK.

Over the last 50 years Nuaire has been particularly renowned for its supply and extract fans and have progressed and expanded its ranges which include iconic brands such as Opus, Genie, Airmover and Ecosmart Squrbo.

The Ecosmart Squrbo started life as the Smart Squrbo which was revolutionary in its day as it was the only packaged supply fan, filter, heater and control packaged into a single compact unit. The fan fast became the UK's top selling supply & extract system outselling the long winded, costly conventional supply and extract systems available.

Nuaire has always tried to inject some humour into a somewhat dower industry by branding their ranges with very memorable names, for instance there is the Squrbo, the Squif and the Xtractor through to the recently launched DAVE.

DAVE is dynamic, attenuated ventilation equipment.

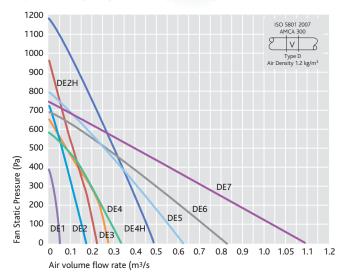

DAVE extract and supply fans represent Nuaire's latest innovation...

- Dynamic & compact solution by duty size
- Attenuated* to ensure lowest case breakout
- Ventilation with Patented 'floating fan' design
- EC technology designed to meet latest legislation & building regulations

*Attenuation pods are standard on 'PLUS' units.

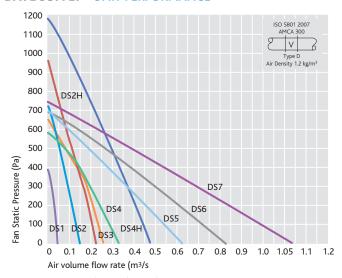

DAVE EXTRACT - UNIT PERFORMANCE

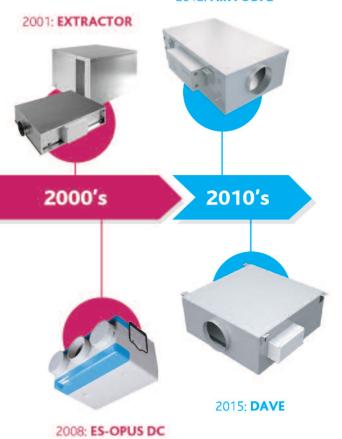

For accurate figures, please refer to pages 17 to 25.

DAVE SUPPLY - UNIT PERFORMANCE

For accurate figures, please refer to pages 32 to 40.

A COMPLETE VENTILATION SERVICE FROM DESIGN TO CUSTOMER SERVICE

Our professional approach to business has led us to be members of, and participate in:

Registered No. EMS517710

Registered No. FM00149

Registered No. OHS553456

Registered No. IMR609253

At Nuaire we offer more than just the leading fans on the market. We offer a complete ventilation service that starts with your concept and includes support, installation advice, excellent after-sales support and even product installation training to ensure you get it right first time.

We understand the many challenges a modern building designer faces, and the regulations that building ventilation must meet, and our full service is designed to make our customers' lives easier from start to finish.

We implement all the relevant industry standards to ensure that all our processes and components are certified. We were the first fan manufacturer in the world to achieve the quality standard ISO 9001, and its commitment to quality remains embedded in all aspects of its operations.

- 1st ventilation manufacturer to achieve ISO9001
- 1st ventilation manufacturer to achieve the Carbon Trust Standard 2009
- 1st ventilation manufacturer to achieve the Queen's Award for Innovation in 2004
- 1st ventilation manufacturer to have AMCA & BSI independently certified test laboratory

DESIGN

With over 20 years of experience Nuaire is able to offer full technical support through bespoke drawings and using the latest technology including REVIT and BIM, helping you find the best solution for your project.

ADVICE

We use the latest technology to ensure our ventilation products meet and often exceed all current legislation and codes of practice. And we don't stop there. Our unique fan selection software helps you choose the right products to meet your specification; while our staff provide expert advice for all aspects of our products and services.

CPD SEMINARS & TRAINING

Nuaire offers CPD seminars on a range of topics from new building regulations to specific ventilation and noise requirements for particular applications. And as part of our commitment to our customers, Nuaire now offers BPEC domestic ventilation installer training, free of charge from our headquarters in South Wales.

TECHNICAL DRAWINGS

Unlike many of our competitors, Nuaire sell direct to the end customer through our team of 65 technical sales engineers based throughout the UK and Ireland. This expert team arrange face-to-face meetings with customers and can give personalised advice on the spot.

CUSTOMER CARE

Our market position is not just defined by the innovative nature of our products but also our approach to business - we are proud to offer our customers an unbeatable customer service experience and regularly survey our customer to make sure we continuously improve. Find out more about our commitment to customer service and how it can benefit you.

We continually monitor our customer service offering. We ensure that it's the best in the industry and exceeds our customer expectations

Wayne Glover, Sales Director

EXTRACT AND SUPPLY SOLUTIONS

OPTIMISING VENTILATION SOLUTIONS FOR OFFICE ENVIRONMENTS TO CREATE A PLEASANT INDOOR AIR QUALITY IN THE MOST EFFICIENT WAY.

A good indoor climate creates a good environment for your workforce. A good working environment can make a big difference for the individual. Studies have shown that a poor indoor climate can affect productivity by as much as 13-15%. The number of errors made goes up two fold as temperatures rise above the 20°C.

In an open-plan office with large numbers of workers, heat emissions will be high, not to mention the heat given off by computers, etc. There also may be large sunlit glazed areas which also help to make the air hot and heavy.

Ventilation removes the air pollution caused by people and machines and replaces it with new, fresh air. This gives a greater feeling of well-being, and, all things being equal, makes employees more productive.

Nuaire have a wide portfolio of ventilation solutions for non-residential buildings such as offices, schools, pubs or restaurants, delivering durability and reliability. The ranges covered on these two pages show a snap shot of Nuaire's supply & extract ranges all of which are suitable for new build and refurbishment projects and are available in a variety of sizes and suitable for interior and exterior applications.

For further details please visit www.nuaire.co.uk/commercial.

◀ (Model: ES-OPUS DC). Low depth (184mm) extract unit.

▲ (Model: DAVE DE3-ES)
Wall mounted DAVE extract unit.

ZONAL & CENTRALISED UNITS

AIRE-VOLVE AVS & AVT (up to 1.8m³/s)

Market leading low profile single & twin fans. Very low energy consumption and SFP's.

DAVE SUPPLY & EXTRACT (up to 1.1m³/s)

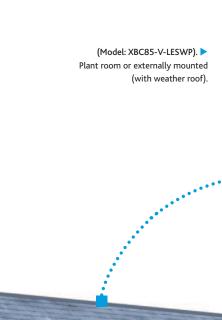

Supply and extract range of single fans.

(up to 20m³/s)

Designed to meet project specific applications. Includes rotary wheels, plate heat exchangers & run around coils.

LOCAL UNITS

XS 6/9/12 (up to 530l/s)

High performance multi-purpose wall, ceiling, panel and roof extract fans.

Inline unit with motor out of air stream. Cost effective low maintenance. Easy to install and suitable for external mounting. Ambient and High temperature ranges.

OPUS 40/60/95 (up to 95l/s)

High performance wall and ceiling extract range complete with Ecosmart control.

ES OPUS DC (up to 110l/s)

High performance, low noise ceiling void extract range with very low profile complete with Ecosmart control.

ECOSMART AIRMOVER (up to 10.6m³/s)

High performance backward curved Centrif, exceptionally quiet, low maintenance, easy to install and suitable for external mounting.

GENIE DC (up to 31l/s)

A market leading 100mm bathroom and kitchen extract range for wall and ceiling applications.

MEV FAMILY (up to 98l/s)

A range of multi-point energy efficient, low depth central extract fans. Unique locating bracket can be fixed in any plane – ideal for 1st or 2nd fix.

MRXBOX95 SERIES (up to 180l/s)

Compact heat recovery range for wall and cupboard applications.

(up to 1.5m³/s)

Market leading heat recovery units, up to 96% efficient.

AXT STAIRWELL PRESSURISATION SYSTEM (up to 73m³/s)

High temperature 'run & standby' axial fan Ideal system for stairwell pressurisation.

Optional access doors make observation, & maintenance very quick & easy to install.

GENERAL NOTE:

All units are suitable for internal or external applications.

WHAT CONTROL OPTIONS ARE AVAILABLE?

THE MOST SUCCESSFUL ENERGY **CONTROL EVER - DEMAND ecosmart** ventilation at your finger tips

Varying the ventilation rate in a building to suit changing occupant levels used to be an expensive option – Ecosmart brings this within everyone's pocket.

Minimising energy loses through re-heating (or cooling) the air replaced through ventilation is at the top of the agenda; building regulations make this a necessity. Ecosmart not only saves energy and carbon emissions it prolongs the life of the unit.

Choosing Ecosmart is your reliable option, used by design engineers for many years and is now an integral feature of most Nuaire fans.

SAVES TIME ON SITE

Ecosmart controls are all pre-assembled, configured and installed directly to the units, which helps significantly reduce the time spent on site.

SIMPLER SYSTEM

No need for VCD (directly on the fan), no wasted energy or noise generation $% \left\{ \left(1\right) \right\} =\left\{ \left($ because air volume can be precisely set via integrated speed control.

SIMPLE & PRECISE COMISSIONING

As recommended in Part L, Ecosmart enables the system to be accurately commissioned via integrated speed control. If the unit is controlled by 0-10V BMS the system's response to a 0-10V dc BMS signal is given below.

Venti	lation mode	Heating mode*	
Local control	0.00	-	
OFF / trickle	0.25	-	
Speed 1	0.50	1.00	
Speed 2	1.50	2.00	
Speed 3	2.50	3.00	
Speed 4	3.50	4.00	
Speed 5	4.50	5.00	
Speed 6	5.50	6.00	
Speed 7	6.50	7.00	
Speed 8	7.50	8.00	
Speed 9	8.50	9.00	
Speed 10	9.50	10.00	

^{*} Only available on relevant unit.

QUIETER SYSTEMS

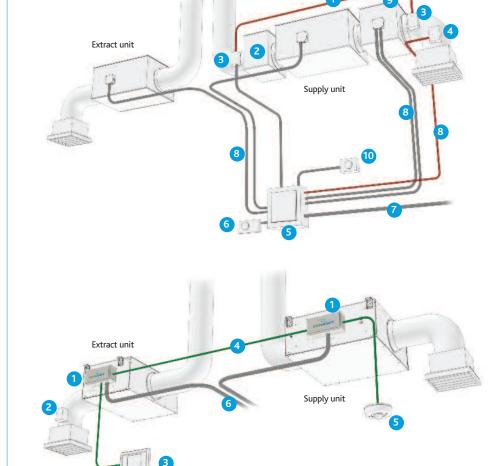

With Ecosmart your system is only at maximum design duty when necessary. **Ecosmart has a 5 year warranty.**

CONTROL CHECKLIST - WHAT'S INCLUDED

The controls indicated in the checklist below are incorporated in the units as standard, enabling you to co-ordinate your controls to avoid duplication and reduce costs. Please refer to this when checking the controls specification. www.nuairegroup.com/specifications

DAVE Extract	DAVE Supply

- 7. 230V Electricity supply
- 8. Electrical cabling 230V
- 9. Electrical heater
- 10. Time clock

ECOSMART SUPPLY & EXTRACT VENTILATION SYSTEM

- 1. Integrated control
- 2. Optional CO₂ sensor
- 3. User control
- 4. (SELV) 12V cable
- 5. Optional PIR sensor
- 5. 230V Electricity supply

SIMPLE TO INSTALL

All controls are pre-assembled, configured and installed directly into the fan. Site time kept to a minimum, quality and efficiency maintained.

SIMPLER SYSTEMS

No need for main VCD, no wasted energy or noise generation because the air volume can be precisely set via the integrated speed control, minimum and maximum speeds easily adjusted via Ecosmart commissioning panel.

SIMPLE, PRECISE COMMISSIONING

As recommended in Part L, Ecosmart enables the system to be accurately commissioned via an integrated speed control, minimum and maximum speeds easily adjusted via commissioning panel integral to the control.

QUIETER SYSTEMS

With Ecosmart your system is only at maximum design duty when absolutely necessary. The noise levels within your systems are lower because the fans are rarely at full speed.

IMPROVED LIFECYCLE

Ecosmart enables the fan or air handling unit to be run at lower speeds. This reduces the maximum load and wear and therefore increases the overall working life of the units.

DEMAND VENTILATION

Only ventilates the area when you want it to - why fully ventilate a room when it's not occupied - maximum savings possible achieved.

HEALTHY ATMOSPHERE

Ecosmart has a trickle function as standard which when activated, via a simple switch, enables you to set a background ventilation rate, keeping the rooms fresh when unoccupied, whilst still saving

energy. System will boost or ramp to maximum design duty when triggered by an Ecosmart or other external device.

PLUG IN CONTROLS

Simple low voltage sensors complete with preplugged cable means that any control function is easily achieved. You decide which conditions to monitor and the system will operate at the optimum speed.

BMS INTERFACE

Integrated BMS features enable any central system to control and monitor the fan or air handling unit via 0-10V signal. This enables full speed control and heating or cooling enable if installed and volt free status indication as standard.

PEACE OF MIND

Ecosmart has a 5 year warranty. 1st year Parts and Labour with remaining years parts only. For further details contact Nuaire.

DAVE EXTRACT FANS ECOSMART CONTROLS

ECOSMART INCLUDES A WIDE RANGE OF OPTIONS

Simple SELV wired, plug-in 'enablers' start and stop the fan, when activated from either start-up or trickle ventilation mode. These 'enablers' include time clocks, infra-red detectors, switch live contacts, humidistats, thermostats and BMS contacts.

All systems must include at least one enabler. (NB. When used, BMS control and time clocks take over all other enablers).

Integrated speed control (inverter or electronic) is included with all Ecosmart controlled fans. ES-ISC are external to some fans and need to be hard wired.

Once the fan is activated by the enabler the sensor takes over. They will maintain comfort/ design conditions by automatically adjusting fan speed up and down. The sensors include temperature, relative humidity, CO2 or as determined by the BMS.

Stylish and simple to operate user control facilitates manual operation where

ECOSMART SPEED CONTROLLING SENSORS

BMS

0-10V dc signal to activate the system and modulate fan speed. Select/Deselect H&C.

Note: this will override any other devices (eg. ES-UCF) fitted (except in Constant Pressure fans).

ECOSMART ENABLERS & DETECTORS

ES-PIR2 (Passive Infra-Red)

Detects movement and activates system. Incorporates a system status LED, overrun timer and timer adjustment.

ES-LCD

Touch screen user control in white incorporating time clock facility. This can control the function of the fan by manual setting or using a set of timed programs.

ES-HUMIDISTAT2

Activates the system when the RH level is above set point. Incorporates two system status LEDs (Green = OK, Red = Failure) and RH set point level adjustment.

ES-THERMOSTAT2

Activates the system when the temperature is above set point. Incorporates two system status LEDs (Green = OK, Red = Failure) and temperature set point level adjustment.

ES-AVI2

When fan failure occurs the AVI will flash a warning. Supplied with pre-plugged 10m length of communication cable.

ES-CO2RMPP

Surface mounted room carbon dioxide (CO_2) sensors which incorporate a temperature sensor. RM = SELV option, RMPP complete with SELV AC powers supply.

ES-HTCSIG

Signal conditioning circuit for humidity, temperature and CO₂ sensors.

ES-TEMP2 Temperature Sensor

Modulate fan speed based on room temperature. Incorporates two system status LEDs (Green = OK, Red = Failure) and temperature set point level adjustment.

ES-RH2 Relative Humidity Sensor

Modulate fan speed based on RH level. Incorporates two system status LEDs (Green = OK, Red = Failure) and RH set point level adjustment.

ES-UCF Manual user control

Manual 'on' and 'off' system user/speed control. Incorporates two system status LEDs (Green = OK, Red = Failure).

ES-CI Semi-automatic user control

Fan, heating & cooling selected by external volt free switch, speed selected by 0-10V signal.

ES-IB Junction box

Designed to be compatible with Ecosmart System this unit is supplied with a pre-plugged 10 metre length of communications cable and has 8 further ports.

ES-CO2 Sensor

Duct mounted sensor to modulate fan speed based on CO_2 levels. Connect to fan directly. Pre-wired with 2m cable (not adjustable).

Switched Live by others

Any mains voltage signal connected to the switched live terminal (S/L) in the unit. This affects the connected fan only.

DAVE EXTRACT FANS

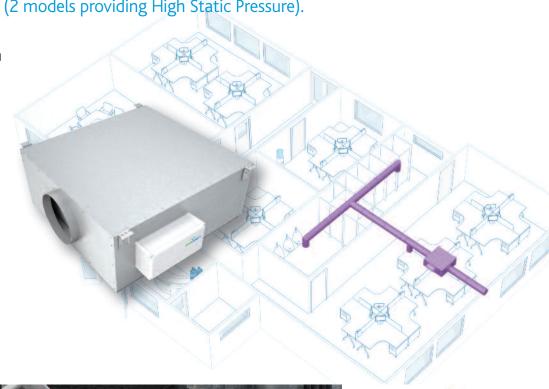

DAVE EXTRACT IS A COMPACT RANGE OF HIGH PERFORMANCE FANS IN 7 CASE SIZES.

Including 9 duty curves (2 models providing High Static Pressure).

All models feature the Nuaire patented 'Floating fan' design negating the requirement for further AV mounts.

Fans are single skinned construction and manufactured from aluzinc which lasts 5 times longer than galvanised steel and provides higher wear resistance.

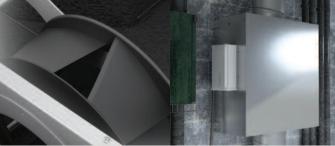

Fans can be mounted in any position. All extract fans can be installed internally or externally without the requirement for additional weather protection.

FEATURES AND BENEFITS

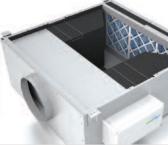

▲ Patented Floating Fan. Units are constructed using the Nuaire 'Patented' floating fan technology which incorporates an inner casing held inside an outer casing by AV mounts, ensuring any vibration is isolated. This construction removes requirement for additional AV mounts.

▲ Latest EC Technology. Performance optimised backward curved impellers and IP54 EC motors provide low specific fan powers and stepless speed control without tonal noise generation.

▲ Flexible orientation. Extract fans can be installed in any orientation as standard.

▲ Multi access. Compact range ideal for space restricted applications such as ceiling voids. Units have top or bottom access as standard allowing for quick install and easy access to fans for maintenance. Model shown: (DE3A-ES).

▲ Energy efficient 'Plug and Play' control. Ecosmart energy efficient control with pre-programmed soft start function helps prevent electrical overloading and minimises pods to ensure low breakout noise levels. mechanical wear. Weatherproof control cover included (if required).

▲ Attenuation Pods. Extract fans are single skin and lined with high density acoustic lining. Units* are fitted with attenuated *Applies to Plus models only.

▲ Quick & easy installation. Fans are supplied with a set of support brackets for quick and easy installation into an existing drop rod system.

▲ One solution. A robust casing design ensures that all units are suitable for internal or external mounting as standard.

DAVE EXTRACT FANS CONSULTANTS SPECIFICATION

UNIT SPECIFICATION

The Unit shall be configured and arranged as detailed on the drawings and in accordance with the schedule of equipment.

Units have a patented 'Floating Fan' technology incorporating an inner casing which is held inside an outer casing by AV mounts, ensuring any vibration is isolated. This technology eliminates the requirement for additional AV mounts.

The units are manufactured in two case lengths – Standard or Type 'A' Extended. Units shall be manufactured from acoustically lined, heavy gauge, corrosion resistant aluzinc and tested to leakage class 'L2'.

The unit will be manufactured to provide a low height solution to enable it to be located in low depth ceiling and floor voids. The units shall have a maximum depth of 233/300/345/370/410/455/500mm (models DE1-7). For ease of installation the unit shall be supplied complete with 4 mounting brackets for inclusion into a drop rod mounting system.

Impellers shall be of high efficiency, performance and sound optimised backward curved design.

The unit shall be fitted with ErP 2015 rated, low energy, high efficiency IP54 EC motorised fans providing low specific fan powers and stepless speed control without tonal noise generation. Fan/motor assemblies have sealed for life bearings with an anticipated working life of 70,000 hours (L10) and shall be suitable for single phase supply. Units are suitable for operation in ambient temperatures of up to 60°C (unit sizes 1 - 5) and up to 40°C (unit sizes 6 - 7).

The unit and ancillaries shall be of the DAVE Extract type as manufactured by Nuaire Ltd $\,$

INSTALLATION

By the appointed contractor. The DAVE extract fan can be installed internally or externally as standard without the requirement for additional weather protection. The extract range can be mounted in any orientation refer to manufacturers installation and maintenance manual for details. Mechanical installation requires mounting of the extract unit in the designated position and connection to the associated duct work. Either top or bottom access is available as standard. Electrical installation requires the provision and connection of single phase electrical supply at the fan.

INSTALLATION REQUIREMENTS

The mechanical contractor shall ensure that all necessary ancillaries are included eg. flexible connections, attenuators, etc. The contractor shall allow for all necessary ductwork transformations to and from the fan unit and any associate components in accordance with the manufacturer's recommendations, DW 144 and general good practice.

RANGE MODELS

DAVE Extract: Standard lined case. Energy efficient Ecosmart control. Circular spigots.

DAVE Extract Plus: Extended lined case type 'A', G3 filter, attenuation pods, Energy efficient Ecosmart control. Circular spigots.

CODE DESCRIPTION

CONTROL SPECIFICATION

The fan unit shall be supplied with the following control:-

ECOSMART – DEMAND CONTROLLED VENTILATION

Provides the facility for energy saving via an intelligent function with local diagnostics status indication, or allows convenient integration with the client BMS with a minimal co-ordination requirement. The factory fitted Ecosmart control panel mounted to the fan unit includes: integral infinitely variable speed /duty control for the extract fan, with independent minimum, maximum speed adjustment for accurate commissioning. The control assembly is side mounted with a removable weather control fascia (if required).

The Ecosmart control enables the fan's speed to be varied automatically as conditions in the ventilated space change by linking low voltage sensors or as the low voltage user control is adjusted. It also enables multiple fans to be directly interlinked. The user control (ES-LCD) and low voltage sensor are supplied complete with a 10m length of low voltage, pre-plugged cable. The control features a run on timer and "background" ventilation function, and is provided with unit status indication, run and fail relays and interface connections for Ecosmart sensors and enablers.

The fans shall have the following energy saving and operational functions integrally installed within it, all components will be pre-wired and fitted by the manufacturer:

- · Integral frequency inverter/speed controller
- Integral adjustable run-on timer
- · Maximum and minimum speed adjustment/setting (trickle and boost)
- · Volt free run & failure/status indication
- 0-10V BMS interface for remote operation
- Low voltage interface with second fan or supply fan
- · Multiple low voltage sockets for interconnection of sensors or fans
- Background ventilation/trickle enable switch.

Fan, Ecosmart controls and associated sensors/ controllers shall be manufactured by Nuaire Ltd. Units fitted with Ecosmart control (code example DE3-ES) shall have a 5 year warranty.

Document.

DAVE EXTRACT FANS WIRING

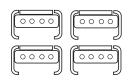

WIRING CONNECTIONS FOR UNITS WITH ECOSMART CONTROL

a) Mains connections.

Mains cables should be suitably sized and terminated at terminals shown on the appropriate diagram.

b) Control Connections.

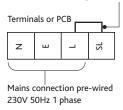

Below: 'Net' connection for Ecosmart devices.

Net - the 4 IDC plug-in connectors are provided for the connection of compatible sensors, manual controls and for linking the fans together under a common control. If more than 4 connections are required, the junction box (product code ES-JB) should be used (see data cable installation).

c) Switched Live (SL) terminal.

Remove link if switched live signal, an enabler or BMS signal is connected.

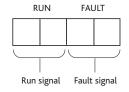

A signal of 100-230V a.c. will activate the fan from either its off state or trickle state (see setting to work-trickle switch).

When the SL is disconnected the fan will over-run (see setting to work-timer adjustment).

Do not take this signal from an isolating transformer.

d) Volt Free Relay Contacts.

LED INDICATION FOR UNITS WITH ECOSMART CONTROL

GREEN: Power on & OK. RED: To much power **PWR** is taken by peripherals or there is a short circuit in

the net cable. Check the cable and use a junction box

(ES-JB) to connect some of the peripherals.

Standby LED on when fan is not running.

GREEN: Fan 1 is running, RED: Fan 1 faulty. Fan 1

Fan 2 GREEN: Fan 2 is running, RED: Fan 2 faulty. (Twin fan only)

Heating* Not applicable. See note. Cooling* Not applicable. See note.

Fault LED on when a fault is present on unit.

Frost* Not applicable. See note.

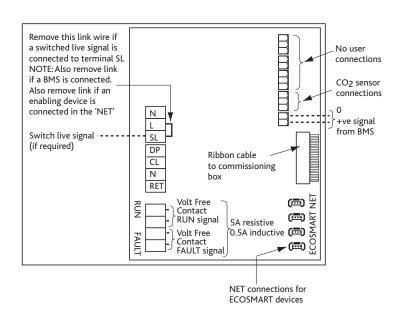

Tx LED on when the controller is transmitting data. Rx LED on when the controller is receiving data.

e) Commissioning panel details. LED indicators **Pwr** O Standby MIN Minimum speed SL run on O Fan 1 adjustment O Fan 2 MAX Maximum speed

O Heating Cooling adjustment Switched Live Run-On SL Run on O Fault Timer adjustment O O Frost TRICKLE Selects trickle running: Отх 0 = off, 1 = selected Trickle Test O Rx = Test button TEST

Note: A Commissioning Procedure document is available on request from Nuaire.

THE CONTROL MODULE

For good EMC engineering practice, any sensor or low voltage data cables should not be placed within 50mm of mains cables or placed on the same cable tray or conduit as mains cables.

^{*} Note that the control panel is common to all the Ecosmart products and will have indicators for functions that are not available in this particular fan. However these indicators will not be illuminated.

COMPLYING WITH BUILDING REGULATIONS

The following information is relevant to the selection of fans for Ventilation Systems, indicating the maximum specific fan powers allowed under Part L (Refer to the Non-domestic Building Services Compliance Guide: 2013 Edition for further details).

The SFP for the entire system (including both supply & extract fans) shall be less than that allowed by these figures. The following tables are the maximum values allowed under Building Regulations when finally commissioned.

Air distribution system	Specific fan po New Buildings	wer (W/(l/s) Existing Buildings
Central balanced mechanical ventilation system with heating and cooling	1.6	2.2
Central balanced mechanical ventilation system with heating only	1.5	1.8
All other central balanced mechanical ventilation systems	1.1	1.6
Zonal supply system where the fan is remote from the zone, such as ceiling void or roof mount	1.1 ted units	1.4
Zonal extract system where fan is remote from zone	0.5	0.5
Zonal supply and extract ventilation system such as ceiling void or roof units serving a single room or zone with heating and heat recovery	1.9	1.9
Local balanced supply and extract ventilation system / such as wall roof units serving a single area with heating and heat recovery	1.6	1.6
Local supply or extract ventilation units such as window / wall / roof units serving a single area (e.g. toilet extract)	0.3	0.4
Other local ventilation supply or extract units	0.5	0.5
Fan assisted terminal (VAV) unit	1.1	1.1
Fan coil units (rating weighted average*)	0.5	0.5
Kitchen extract, fan remote from zone with grease filter	1.0	1.0

*Note: The weighted average is calculated by the following formula: $\frac{P_{mains,1}.SFP_1 + P_{mains,2}.SFP_2 + P_{mains,3}.SFP_3 + ...}{P_{mains,1} + P_{mains,2} + P_{mains,3} + ...}$ where P_{mains} is useful power supplied from the mains in W

Extending SFP for additional components in new and existing Component	buildings (SFP (W/(l/s))
Additional return filter for heat recovery	+0.1
HEPA filter	+1.0
Heat recovery - thermal wheel system	+0.3
Heat recovery - other systems	+0.3
Humidifier / dehumidifier (air conditioning system)	+0.1

Example: For a central mechanical ventilation system with heating and cooling, and heat recovery via a plate heat exchanger plus return filter:

SFP =
$$1.6 + 0.3 + 0.1 \text{ W/(l/s)}$$

= 2.0 W/(l/s)

Recommended minimum dry heat recovery efficiency for heat exchangers in new and existing buildings

Heat exchanger type	Dry Heat recovery efficiency				
Plate heat exchanger	50%				
Heat pipes	60%				
Thermal wheel	65%				
Run around coil	45%				

SECTION 6

Permissible maximum specific fan power and pressure drop in air distribution systems.

	Air distribution system	Maximum permissible specific fan power (W/(l/s)	Maximum external system pressure drop (Pa)
	Central mechanical ventilation system including heating, cooling and heat recovery	1.8	400 supply 250 extract
	Central mechanical ventilation system including heating and cooling	1.8 (2.2)	400 supply 250 extract
	Central mechanical ventilation system including heating only	1.6 (1.6)	400 supply 250 extract
	All other central mechanical ventilation systems	1.4 (1.8)	400 supply 250 extract
	Zonal supply system where the fan is remote from the zone, such as ceiling void or roof mounted units	1.2 (1.5)	200
Ī	Zonal extract system where the fan is remote from the zone	0.6 (0.6)	200
	Zonal supply and extract ventilation units such as ceiling void or roof units serving a single room or zone with heating and heat recovery	2.0 (2.0)	150
	Local supply and extract ventilation system such as wall / roof units serving a single area with heating and heat recovery	1.8 (1.8)	150
	Local supply or extract ventilation units such as window / wall / roof units serving a single area (e.g. toilet extract)	0.4 (0.5)	30
	Other local ventilation units	0.6 (0.6)	30
	Fan assisted terminal variable air volume (VAV) unit	1.2 (1.2)	30
	Fan coiled units	0.6 (0.6)	30

Note: 1. For existing buildings the maximum permissible specific fan power is given in brackets.

DAVE SUPPLY FANS

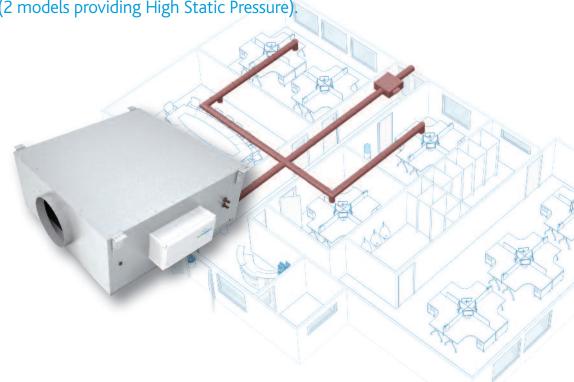

DAVE SUPPLY IS A COMPACT RANGE OF HIGH PERFORMANCE FANS IN 7 CASE SIZES.

Including 9 duty curves (2 models providing High Static Pressure).

All models feature the Nuaire patented 'Floating fan' design negating the requirement for further AV mounts.

Fans are single skinned construction and manufactured from aluzinc which lasts 5 times longer than galvanised steel and provides higher wear resistance.

All supply fans can be installed internally or externally without the requirement for additional weather protection.

FEATURES AND BENEFITS

▲ Patented Floating Fan. Units are constructed using the Nuaire 'Patented' floating fan technology which incorporates an inner casing held inside an outer casing by AV mounts, ensuring any vibration is isolated. This construction removes requirement for additional AV mounts.

▲ Latest EC Technology. Performance optimised backward curved impellers and IP54 EC motors provide low specific fan powers and stepless speed control without standard allowing for quick install and easy tonal noise generation.

▲ Multi access. Compact range ideal for space restricted applications such as ceiling voids. Units have top or bottom access as access to fans for maintenance. Model shown: (DS3A-ES).

▲ Coils. LPHW coils are supplied with 2 port Pressure Independent valves (PICV). Electric heaters are supplied with thyristor control. A No heater option is also available.

▲ Energy efficient 'Plug and Play' control. Ecosmart energy efficient demand control with pre-programmed soft start function helps prevent electrical overloading and minimises mechanical wear. Weatherproof control cover included (if required).

▲ Attenuation Pods. All supply fans are single skin and lined with high density acoustic lining. Units* are fitted with attenuated pods to ensure low breakout

▲ Quick installation. Fans are supplied with a set of support brackets for easy installation or inclusion into an existing drop rod system.

▲ One solution. A robust casing design ensures that all units are suitable for internal or external mounting as standard.

DAVE SUPPLY FANS CONSULTANTS SPECIFICATION

UNIT SPECIFICATION

The Unit shall be configured and arranged as detailed on the drawings and in accordance with the schedule of equipment.

Units have a patented 'Floating Fan' technology incorporating an inner casing which is held inside an outer casing by AV mounts, ensuring any vibration is isolated. This technology eliminates the requirement for additional AV mounts.

The Extended length case Type 'A' shall be acoustically lined and manufactured from heavy gauge, corrosion resistant aluzinc and tested to leakage class 'L2'.

The unit will be manufactured to provide a low height solution to enable it to be located in low depth ceiling and floor voids. The units shall have a maximum depth of 233/300/345/370/410/455/500mm (models DS1-7). For ease of installation the unit shall be supplied complete with 4 mounting brackets for inclusion into a drop rod mounting system.

Impellers shall be of high efficiency, performance and sound optimised backward curved design.

The unit shall be fitted with ErP 2015 rated, low energy, high efficiency IP54 EC motorised fans providing low specific fan powers and stepless speed control without tonal noise generation. Fan/motor assemblies have sealed for life bearings with an anticipated working life of 70,000 hours (L10) and shall be suitable for single phase supply. Units are suitable for operation in ambient temperatures of up to 60°C (unit sizes 1 - 5) and up to 40°C (unit sizes 6 - 7).

The unit and ancillaries shall be of the DAVE Supply type as manufactured by Nuaire Ltd.

COIL TYPES - LOW PRESSURE HOT WATER

(Example code: DS2A-LES)

The Low Pressure Hot Water heating coil shall be factory fitted with a 2-port pressure independent control valve (PICV) and actuator. All components prepiped, assembled and tested by the manufacturer.

The system shall have frost protection which shall, at temperatures below 4 degrees C, fully open the 2-port pressure independent valve and only start the fan when the temperature in the chamber has risen to the designated set point. NOTE: Heaters will need an enable signal for heater (ES-LCD, 0-10V BMS or ES-CI).

ELECTRIC HEATER BATTERY

(Example code: DS2A-EES)

The Electric Heater Battery shall be of stainless steel sheathed element design, factory fitted and pre-wired to an integral closed loop thyristor control. NOTE: Heaters will need an enable signal for heater (ES-LCD, 0-10V BMS or ES-CI).

NO HEATER

(Example code: DS2A-NES)

The unit is also available without a heater fitted.

INSTALLATION

By the appointed contractor. The DAVE supply fan can be installed internally or externally as standard without the requirement for additional weather protection. Refer to manufacturers installation and maintenance manual for details on mounting orientation.

Mechanical installation requires mounting of the supply unit in the designated position and connection to the associated duct work. Either Top or bottom access is available. Electrical installation requires the provision and connection of single phase electrical supply at the fan.

INSTALLATION REQUIREMENTS

The mechanical contractor shall ensure that all necessary ancillaries are included eg. flexible connections, additional attenuators, etc.

The contractor shall allow for all necessary ductwork transformations to and from the fan unit and any associated components in accordance with the manufacturer's recommendations, DW 144 and general good practice.

RANGE MODELS

DAVE Supply Plus No Heater: Extended lined case Type 'A', G4 filter, attenuation pods, Energy efficient Ecosmart control. Circular spigots.

DAVE Supply Plus LPHW: Extended lined case Type 'A', LPHW coil with 2 port pressure independent valve (PICV), G4 filter, attenuation pods, Energy efficient Ecosmart control. Circular spigots.

DAVE Supply Plus Electric heater: Electric heater: Extended lined case Type 'A', Electric heater & thyristor control, G4 filter, attenuation pods, Energy efficient Ecosmart control. Circular spigots.

CODE DESCRIPTION

- 1. DAVE Range
- 2. Supply fan
- 3. Case size (1-7)
- 4. Case type: A = Extended
- L = LPHW Coil/valve
 E = Electric heater,
 N = No heater
- 6. ES = Ecosmart control

CONTROL SPECIFICATION

The fan unit shall be supplied with the following control:-

ECOSMART CONTROL - DEMAND CONTROLLED VENTILATION

Provides the facility for energy saving via an intelligent function with local diagnostics status indication, or allows convenient integration with the client BMS with a minimal co-ordination requirement. The factory fitted Ecosmart control panel mounted to the fan unit includes: integral infinitely variable speed /duty control for the extract fan, with independent minimum, maximum speed adjustment for accurate commissioning. The control assembly is side mounted with a removable weather control fascia (if required).

The Ecosmart control enables the fan's speed to be varied automatically as conditions in the ventilated space change by linking low voltage sensors or as the low voltage user control is adjusted. It also enables multiple fans to be directly interlinked. The user control (ES-LCD) and low voltage sensor are supplied complete with a 10m length of low voltage, pre-plugged cable.

The control features a run on timer and "background" ventilation function, and is provided with unit status indication, run and fail relays and interface connections for Ecosmart sensors and enablers.

DAVE SUPPLY FANS CONSULTANTS SPECIFICATION

nuaire

The fans shall have the following energy saving and operational functions integrally installed within it, all components will be pre-wired and fitted by the manufacturer:

- Integral frequency inverter/speed controller
- · Integral adjustable run-on timer
- Maximum and minimum speed adjustment/ setting (trickle and boost)
- · Volt free run & failure/status indication
- 0-10V BMS interface for remote operation, this will enable the following functions:-Switch the unit ON/OFF. Variable speed/duty control, switch from low speed to high speed, enabling heating where applicable.
- · Low voltage interface
- Multiple low voltage sockets for interconnection of sensors or fans
- Background ventilation/trickle enable switch.

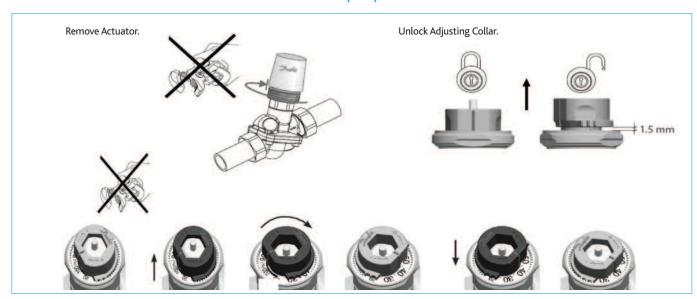

Fan, Ecosmart controls and associated sensors/ controllers shall be manufactured by Nuaire Ltd.

Units fitted with Ecosmart control (code example DS3A-LES) shall have a 5 year warranty.

Specification Document.

NB: LPHW supply units have a 2 Port Pressure Independent control Valve (PICV) fitted. If the LPHW system is not run via a 'Constant Pressure Pump' then provision must be made to incorporate a 'Bypass' into the system to maintain a minimum level of flow through the pump when the 2 Port PICV is closed.

DAVE SUPPLY FANS WIRING

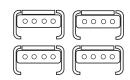

WIRING CONNECTIONS FOR UNITS WITH ECOSMART CONTROL

a) Mains connections.

Mains cables should be suitably sized and terminated at terminals shown on the appropriate diagram.

b) Control Connections.

Below: 'Net' connection for Ecosmart devices.

Net - the 4 IDC plug-in connectors are provided for the connection of compatible sensors, manual controls and for linking the fans together under a common control. If more than 4 connections are required, the junction box (product code ES-JB) should be used (see data cable installation).

c) Switched Live (SL) terminal.

Remove link if switched live signal, an enabler or BMS signal is connected.

Terminals or PCB

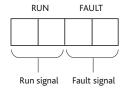

Mains connection pre-wired 230V 50Hz 1 phase

A signal of 100-230V a.c. will activate the fan from either its off state or trickle state (see setting to work-trickle switch).

When the SL is disconnected the fan will over-run (see setting to work-timer adjustment).

Do not take this signal from an isolating transformer.

d) Volt Free Relay Contacts.

LED INDICATION FOR UNITS WITH ECOSMART CONTROL

PWR GREEN: Power on & OK. RED: To much power

is taken by peripherals or there is a short circuit in the net cable. Check the cable and use a junction box

(ES-JB) to connect some of the peripherals.

Standby LED on when fan is not running.

Fan 1 GREEN: Fan 1 is running, RED: Fan 1 faulty.

Fan 2 GREEN: Fan 2 is running, RED: Fan 2 faulty. (Twin fan only)

Heating* Not applicable. See note.

Cooling* Not applicable. See note.

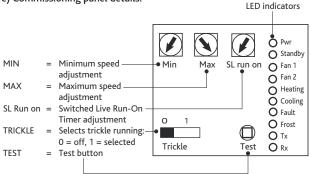

Fault LED on when a fault is present on unit.

Frost* Not applicable. See note.

Tx LED on when the controller is transmitting data.Rx LED on when the controller is receiving data.

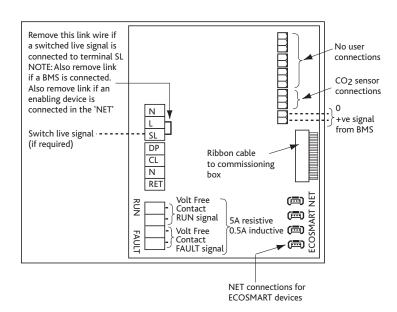

* Note that the control panel is common to all the Ecosmart products and will have indicators for functions that are not available in this particular fan. However these indicators will not be illuminated.

e) Commissioning panel details.

Note: A Commissioning Procedure document is available on request from Nuaire.

THE CONTROL MODULE

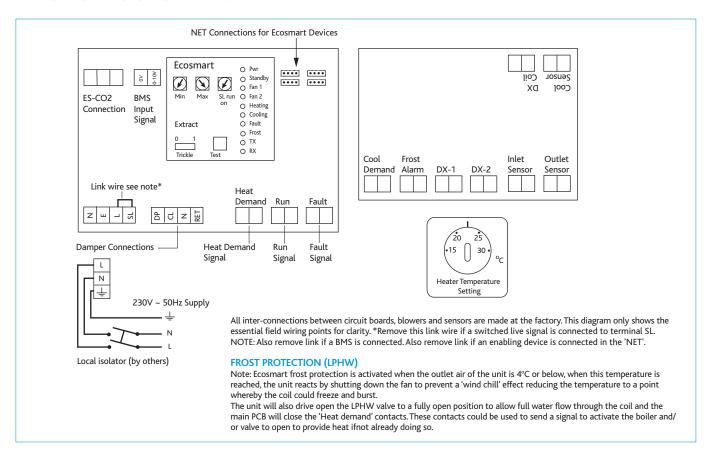

For good EMC engineering practice, any sensor or low voltage data cables should not be placed within 50mm of mains cables or placed on the same cable tray or conduit as mains cables.

For resistance figures refer to Nuaire fan selection programme.

G3 and G4 filters are suitable for Extract Plus fans. G4 and F7 are suitable for Supply Plus fans.

G3 filters are not recommended for Supply Plus fans.

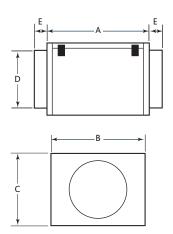

FILTER CASSETTE

Filter Cassettes are constructed from galvanised steel and are fitted with circular spigots. The filter media is of non woven synthetic fibres which are resistant to moisture, fungus, bacteria and frost to G4 specification.

Filter media access panel with quick release clips. Typical code: SF-100

HEAT EXCHANGER (EFFICIENCY UP TO 60%)

Manufactured from galvanised steel. The units provide a means of recovering heat from an extract system and transferring the heat to a complementary air supply system. Designed for horizontal mounting only, consisting of an insulated casing housing a plate heat exchanger. An internal drip tray and drain connection is provided. The access panel can be configured top or bottom. Filters must be fitted upstream on both sides to protect matrix. Typical code: HX100

ECOSMART DUCT HEATER

Provided to boost the air temperature if the standard heating is not sufficient. Controlled directly from the Ecosmart Squrbo controls. Duct Heaters are constructed from galvanised steel, and can be fitted in the horizontal or vertical position. Terminals are provided for electrical connection to heating elements which are centrally located in air stream.

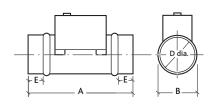

All heaters are fitted with a high temperature safety cut out (rated 13 amps) with a manual re-set button located on the unit terminal box.

Typical code: ESH2

Note: The Duct Heater requires a separate power supply.

ANCILLARIES

SILENCERS - INLINE CIRCULAR

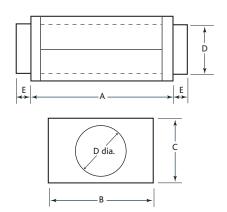

The In-line attenuator shall be constructed in galvanised steel and be fitted with duct work connection spigots. Acoustic media shall be a low density foam to prevent material migration into the airstream.

Typical code: SIL-100

Dimensions (mm) & Weights

Code	Α	В	С	D	E	125	250	500	1K	2K	4K	8K V	Veight Kg
SIL-150	600	300	184	150	50	-5	-8	-17	-35	-40	-17	-8	6.6
SIL-200	600	350	234	200	50	-9	-8	-14	-29	-23	-12	-14	9.9

D			11 11 1										

Resistance to airflow is negligible.

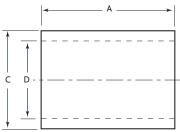

SILENCERS - INLINE CIRCULAR

Attenuators and 'Pods' (when fitted) shall be rigidly constructed from galvanised steel, internally lined with sound absorbing material not less than 100mm thick retained by galvanised steel perforated sheet. Attenuator 'end faces' shall be drilled and tapped to match the flange details of the associated fan. Attenuator 'sound absorbing material' $shall\ be\ chemically\ inert, non-combustible, non-hydroscopic\ and\ vermin\ resistant.\ Attenuator\ shall\ be\ tested\ in$ accordance with BS4718:1971 ASTME 477.

Application: All attenuators shall be suitable for internal and external use at any installed angle Note: Podded attenuators with higher acoustic performance and other specifications are available.

Please contact Nuaire Technical for details.

ANCILLARIES

TERMINATOR COWLS

To provide a weatherproof route for supply & exhaust air to your ducted system.

Cowls are manufactured from flame retardant polymer and can be supplied with gravity backdraught shutters, bird guards and hand guards. The terminal is finished in BS00A05 Grey as standard. All BS or RAL colours are available.

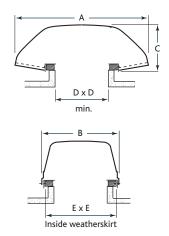

The cowl will normally be fitted to the upstand by a roofing contractor or builder. The Cowl can be fitted without shutters on a 0-60 degree pitched roof with its longer side running down the roof slope. The Cowl can be fitted with its longer side running across a slope of less than 85 degrees from the horizontal. When fitted to a wall the longer side must run horizontal.

Typical code: TRTS-A Note: S = Shutters, BG = Bird Guard

Note: Air Pressure Drop of Attenuator (Pa) = $Z \times Q2$ where Z = Factor listed in table below. Q = Air Volume Flow Rate (m³/s)

TRTS-A	900	620	340	460	600	12.3	67	67	118
TRTS-B	1080	740	375	560	695	14.7	39	39	118

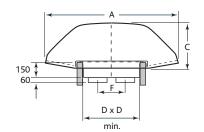

SUPPLY / EXTRACT COWLS

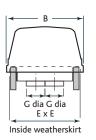

Supply/Extract Cowl: rigid flame retardant cowl, conforming with BS476 (Part 1 class 11) supplied in grey (BS 00 A 05) as standard (any BS or RAL colours available), fixing directly to the base using non-rusting sealed fixings. Air plenum is manufactured from galvanised steel incorporating supply & extract chambers. Rigid spigots are provided for connection of duct work. Supply & extract chamber is fitted with a bird guard. Typical code: TRSE3

Dimensions (mm) & Weights

Code	Α	В	С	D	E	F	G	Weight Kg
TRSE3	900	620	340	460	600	200	150	14
TRSE4	1320	964	475	700	945	345	200	30
TRSE5	1320	964	475	700	945	345	250	30
TRSE6	1320	964	475	700	945	345	315	30
TRSE7	1780	1170	485	900	1150	450	400	57

Resistance to airflow of this item is negligible.

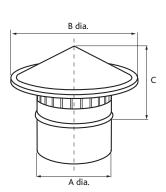

GALVANISED STEEL ROOF COWL

The roof cowl shall be the Nuaire type RPC-* The cowl is manufactured from galvanised steel with a bird guard mesh welded in place for reliability and strength. Easy to fit, the cowl will fit directly to spiral or plain circular duct. When used with Nuaire roof pipe flashing a secure terminal through the roof is ensured.

Dimensions (mm) & Weights

Code	A dia.	B dia.	С	Free Area%*	Weight (kg)
RPC-4	100	200	85	138	0.6
RPC-8	200	315	105	131	1.1
RPC-10	250	380	140	119	1.4
RPC-12	315	475	175	122	2.0
RPC-16	400	600	215	125	4.0

*The total openings of the cowl as a percentage of the connecting duct size.

NUAIRE PRODUCTS ACOUSTIC GUIDELINES

IT IS AT LEAST TEN TIMES MORE EXPENSIVE TO CORRECT AN ACOUSTIC PROBLEM THAN TO PREVENT IT.

These laboratory test standards are designed to provide a consistent test method and which to a limited extent that simulate the ways that a fan may be used in a variety of installations.

Nuaire generally quote the noise levels separately for the unit inlet, outlet and casing radiated (or breakout) sources, to enable the system designer to properly evaluate the product in the application.

The noise level measured on site, for example during the commissioning process, is the sound pressure level – and this cannot be directly compared with the sound power levels quoted in our fan selection tools (Nuaire catalogue and Fan Selector).

Nuaire typically also quote a free field dBA level at 3m, and this figure, whilst useful for comparison with other products, has a very specific definition – and cannot be used for acoustic design purposes.

The dBA @ 3m figure quoted will never correspond to a dBA measurement taken at 3m from a product in a real building.

Acoustics is a complicated subject and must be treated with caution as part of the services design process. Our sales engineers and technical support staff will often be able to offer advice on appropriate product types for an application, but it is often necessary to refer to acoustic specialists for a definitive design solution.

Nuaire have put together the following bullet points for your information and assistance:-

SYSTEM DESIGN – GENERAL AND COMMON SENSE ISSUES

- · Position the fan for minimum noise impact
- · Position grilles and diffusers for minimum noise impact
- Design the system for low pressure drop and smooth air flow = low velocity ducting and grilles etc.
- Where appropriate, use barriers and enclosures of a suitable specification –
 ensuring that they are properly installed (eg ceiling tiles and bulkheads).
 Special acoustic grade materials are generally available, and the first
 principle is to add mass to the system eg layers of plasterboard.
- Use appropriately specified attenuators and Anti-Vibration mounts again properly installed and not bridged to the support structure.
- Flexible or lightweight supporting structures, or slow running fans, can require higher levels of mechanical isolation, and this can only be achieved with high deflection spring type mounts.
- Flexible Connectors are often a particular source of breakout noise if they must be used in sensitive areas, then an acoustic grade should be specified.

- Single skinned rectangular attenuators can also be vulnerable to breakout at the fan connection consider this carefully in your specification. Ideally, use attenuators that have been specified with breakout protection, and fit the flexible connectors at inlet attenuator entry and outlet attenuator exit. Any deviation from a straight inlet/outlet condition, whether by crumpled flexible connectors, bends, or offset transformation pieces, will lead to an increase in the quoted in-duct noise levels.
- Specify the correct duty with minimal allowances and commission the systems properly.

As a very rough "rule of thumb", due to the combined effects of an acoustic room property known as "directivity" and a distance correction for a real room situation, it is possible that the dBA level measured in a room with a ceiling void mounted fan above it, can be increased by 8-9 dBA possibly up to 14 dBA higher than the Free Field figure.

In general terms, a specification of NR 35 or 40 dBA represents a very acceptable level for most people in an office environment.

A requirement to achieve levels of NR 30 or 35 dBA or less in a working space, can be considered as challenging, and may require specialist acoustic assistance. At the very least, with such a specification, the acoustic requirements should be a major design consideration.

Designated "Quiet" areas and bedrooms will need to operate at these levels and preferably lower.

AIRE-VOLVE TWIN FANS Internal & External options

Nuaire Ecosmart Constant Pressure systems are designed for continuous ventilation. They feature Ecosmart on demand control, so costs are kept low.

When a room is occupied, a PIR or switch triggers the damper, which immediately operates as required, returning to background ventilation when the room is vacated.

The Constant Pressure Fan offers up to 70% savings over conventionally controlled central systems and should the primary fan or motor fail, the automatic change over guarantees uninterrupted ventilation because it works at reduced duty the unit consumes less power and is very quiet. This energy efficient ventilation solution is extremely cost effective to run and simple to install as all components are delivered assembled, wired and tested. Specify Nuaire Ecosmart Constant Pressure and blow away your client's energy bills. Typical applications include Schools, Hotels, Apartments, Nursing Homes and Offices.

Nuaire For the complete ventilation solution.

OR

AIRE-VOLVE SINGLE FANS

Features & Benefits

Latest EC motor Technology - Guarantees longer life and lower SFPs.

Double walled panel with 35mm acoustic lining - Ensures lowest breakout.

Built-in Ecosmart control - Energy efficient demand control ventilation solution with 80% controllability allowing the duty to be adjusted if ductwork installation changes during construction on site.

Class L2 Leakage - Units are tested to meet Class L2 leakage. (BS EN 1886 : 2007).

Most compact 'size for duty' case available on the market - Ideal for applications with restricted ceiling voids. Offers either top or bottom access.

Fully enclosed fan spigot - Fan and matching silencer system reduces breakout and guarantees a superior acoustic solution.

Manufactured from corrosion resistant heavy gauge Aluzinc - Has 5 times longer life than galvanised steel and provides higher wear resistance.

Wide direct duty range - Available up to 1.9m³/s.

Removable unit end panel - Can be attached to matched silencers prior to connection to ducting system.

Designed matched silencers - Matched silencers acoustically designed to work in conjunction with Aire-Volve single fans.

Full accessory range - Includes matched silencers, optional rectangular end panel and dampers.

5 Year Warranty - Peace of mind.
