FIREBIRD

HEATING SOLUTIONS

Firebird is proud to declare over 30 years manufacturing in the heating industry, developing some of the most renowned products on the market. More recently, the company has advanced into renewable energy systems and combined efficient heating systems.

From the robust elite manufacturing process, through to the dedicated sales, technical and training teams, Firebird can guarantee the highest quality product and service. In addition, our products are rigorously tested and approved to all relevant European and national standards.

Firebird continues to expand its product range. In 2012 we launched the Multifuel Backboiler Inset Stove, with up to 81% efficiency. This year we are launching the Multifuel Dry Inset Stove. Both stoves are 100% Irish made. Other new products this year include the Solid Fuel Heat Exchanger and the Junction Buffer 2-4 Box.

Our technical team are always on hand to advise on the best heating system for your domestic or commercial premises. We have the capability to integrate all our products to one combined system, reducing your energy bills by at least 20% per annum.

Firebird has recently completed a number of commercial and domestic cascading, multi functional systems. Please contact our technical department for more information on these projects.

Accreditations:

Firebird is ISO-9001 accredited and a long-standing member of OFTEC.

In addition, Firebird products enjoy some of the following accreditations:

Enviromax Condensing Boilers

Features & Benefits

SEDBUK Band A Efficiency

- A modern, truly condensing boiler that delivers the efficiency promised.
- Up to 25% savings in fuel consumption compared with non-condensing boilers.
- Lower emissions and carbon dioxide.

Designed as a condensing boiler - not an "add-on"

- The condensing heat exchanger is an integral part of the boiler shell.
- Condenser is located at the bottom of the appliance. There is no fear of corrosion.
- Easy to install and service.

Robust design

- Enviromax™ boilers are built from premium grade steel with a minimum 4 mm gauge.
- All indoor models have a heavy duty casing with a polyester-coated finish to protect the boiler from normal wear and tear.

Widest range on the market

- With up to 60 models available, we have something to suit every customer. Ranging from 12kW to 100kW.

Installer Friendly Features

- 4-tapping points on most boiler models - increases installation options.

- Front service access - easy access to common service parts.

- 7-pin plug - simplifies wiring.

- Optional condensate pump - lifts up to 5m - perfect solution where natural gradient is not available.

- Multi-directional flue options - increases installation options.

Popular

Ideal for installation in a dedicated boiler house, garage or outbuilding.

Features

- Patented heat exchanger design.
- Built from premium quality steels.
- Compact design.
- 4-tapping points for ease of installation.
- Sturdy well insulated casing minimise heat loss.
- High performance Riello RDB burner.
- SEDBUK Band A Efficiency.
- Eight models in outputs from 12kW to 100kW.

Heatpac & Slimline Heatpac

The Enviromax Heatpac range does not need to be housed in a building, thereby reducing cost and labour. The boilers come with removable sides for easy access to any part of the unit. Piping may be carried out from the back or from underneath.

Features

Heatpac

- High quality weather-proof PVC-coated casing (outputs up to 35kW).
- Fully insulated to prevent heat loss.
- Patented heat exchanger design.
- 4-tapping points for ease of installation.
- Fitted with frost protection stat.
- Whisper quiet operation.
- Stainless steel terminal guard.
- High performance Riello RDB burner.
- SEDBUK Band A Efficiency.
- Six models in outputs from 12kW to 73kW.

Slimline Heatpac (as above plus the following)

- Only 465mm wide.
- Three models in outputs from 15kW to 35kW.

Heatpac, Systempac, Combipac

Slimline Heatpac

Systempac & Combipac

The Enviromax Systempac and Combipac are external boilers with similar specifications to their equivalent indoor model, with the addition of a built in frost thermostat.

Features

Systempac

- High quality weather-proof PVC-coated casing.
- Low pressure switch protects boiler in the event of system water loss.
- Fully insulated to prevent heat loss.
- Patented heat exchanger design.
- Fitted with frost protection stat.
- Whisper quiet operation.
- Stainless steel terminal guard.
- Flue can exit left or right.
- High performance Riello RDB burner.
- SEDBUK Band A Efficiency.
- Four models in outputs from 15kW to 44kW.

Combipac

- Excellent hot water performance - over 20 litres/min on 35kW model.
- PCB controller using highly accurate thermistors.
- Rapid re-heat after draw-off.
- High quality weather-proof PVC-coated casing.
- Fully insulated to prevent heat loss.
- Patented heat exchanger design.
- Flue can exit left or right.
- Twin circulating pumps – no diverter valve required
- Fitted with frost protection stat.
- Fully insulated and acoustically designed for ultra quiet operation.
- High performance Riello RDB burner.
- SEDBUK Band A Efficiency.
- Three models in outputs from 15kW to 35kW.

Kitchen

A high quality finish ensures that this boiler won't look out of place in your kitchen.

Features

- Compact design - fits under standard kitchen worktop (outputs up to 35kW).
- Hard wearing casings with premium quality finish.
- Patented heat exchanger design.
- 4-tapping points for ease of installation.
- Front service access.
- PCB controller with anti cycling function (outputs up to 35kW).
- Fully insulated and acoustically designed for ultra quiet operation.
- Multi directional flue options.
- High performance Riello RDB burner.
- Optional condensate pump.
- SEDBUK Band A Efficiency.
- Seven models in outputs from 15kW to 100kW.

Dimensions (mm)

Combi

The Enviromax Combi boiler provides both domestic hot water and central heating water in a single appliance, saving you the cost and space associated with a hot water tank.

Features

- Excellent hot water performance
- over 20 litres/min on 35kW model.
- PCB controller using highly accurate thermistors.
- Rapid re-heat after hot water draw-off.
- Compact design - fits under standard kitchen worktop (outputs up to 35kW).
- Hard wearing casings with high quality finish.
- Patented heat exchanger design.
- Twin circulating pump
- no diverter valve required.
- Fully insulated and acoustically designed for ultra quiet operation.
- Multi directional flue options.
- High performance Riello RDB burner.
- Optional condensate pump and timer controllers.
- SEDBUK Band A Efficiency.
- Three models in outputs from 15kW to 35kW.

Condensing Flue Kits & Accessories

Flues are a critical part of a boiler installation. A correctly installed flue will ensure clean and efficient operation of the boiler. Firebird offer a range of high quality stainless steel flue kits that ensure optimum boiler performance and longer design life. Three types are available:

- Low Level Flue
- High Level Flue (Vertical & Horizontal)
- Conventional Flue

NB: Only Firebird-approved flue kits and accessories may be used on Firebird boilers. Use of unapproved flue kits may invalidate the boiler warranty policy.

LOW LEVEL FLUE KITS

Low level flue kits have become popular in recent years due to their convenient size and ease of installation. When installing a condensing low level flue, consideration should be given to the discharge of the condensate plume as it may cause a nuisance to neighbouring properties. In some cases a plume dispersal kit may be advisable.

Sales Code	Product Description

* A - Low Level Flue Kit

All low level flue kits contain:

- Telescopic balanced flue with Venturi Insert
- Terminal Guard
- Deflector Plate
- Wall Seal
- Silicone Lubricant
- Jubilee Clip for air snorkel
- Assembly Instructions

PLUME DISPERSAL KITS

A plume dispersal kit can be connected to the exhaust terminal of a low level flue in order to discharge flue gases [plume] up over head height and neighbouring properties. Plume dispersal options can be either used with a kit or retro-fitted to an existing concentric flue.

HIGH LEVEL HORIZONTAL & VERTICAL FLUE KITS

High level flue kits are the optimal flue system as they provide good natural draft and ensure that the flue gases are discharged away from habitable areas.

Solar Thermal Systems

Firebird's range of solar thermal systems is arguably the most extensive on the market and offers customers a wide choice of collectors, system configurations and accessories. Designed and manufactured to Firebird's exacting standards, our solar systems are second to none in terms of performance, durability and efficiency. All our solar systems have been placed through rigorous testing to ensure the highest standards have been achieved.

Moreover, when you purchase a Firebird product you have the back-up of our technical team and nationwide service support. Peace of mind from a company that has delivered premium heating products for over 30 years.

CPK7210-N Flat Panel Collector

TZ58-1800 Heat Pipe Solar Collector

CVSKC-10 Vacuum Tube Collector

Accreditations

Firebird solar systems and collectors have the following accreditations.

Why solar energy?

Solar energy is free with the annual solar energy on the earth's surface being 10,000 times greater than the annual global energy demand. Solar thermal systems can deliver up to 70% of the hot water requirements for an average household in Ireland and in the U.K. Installation of solar energy on a larger scale, ie. commercial, can make a great contribution to commercial energy costs.

By using solar energy to heat hot water, you will be helping to reduce our dependence on fossil fuels, while improving the energy efficiency and potentially the value of your home. A typical domestic solar hot water system can save in excess of a tonne of CO₂ per annum. In particular, solar energy scores positively with the new BER - Building Efficiency Rating scheme.

Is there enough solar energy?

When designed correctly, solar heating could provide the total hot water requirement for the summer months and up to 30% during winter months.

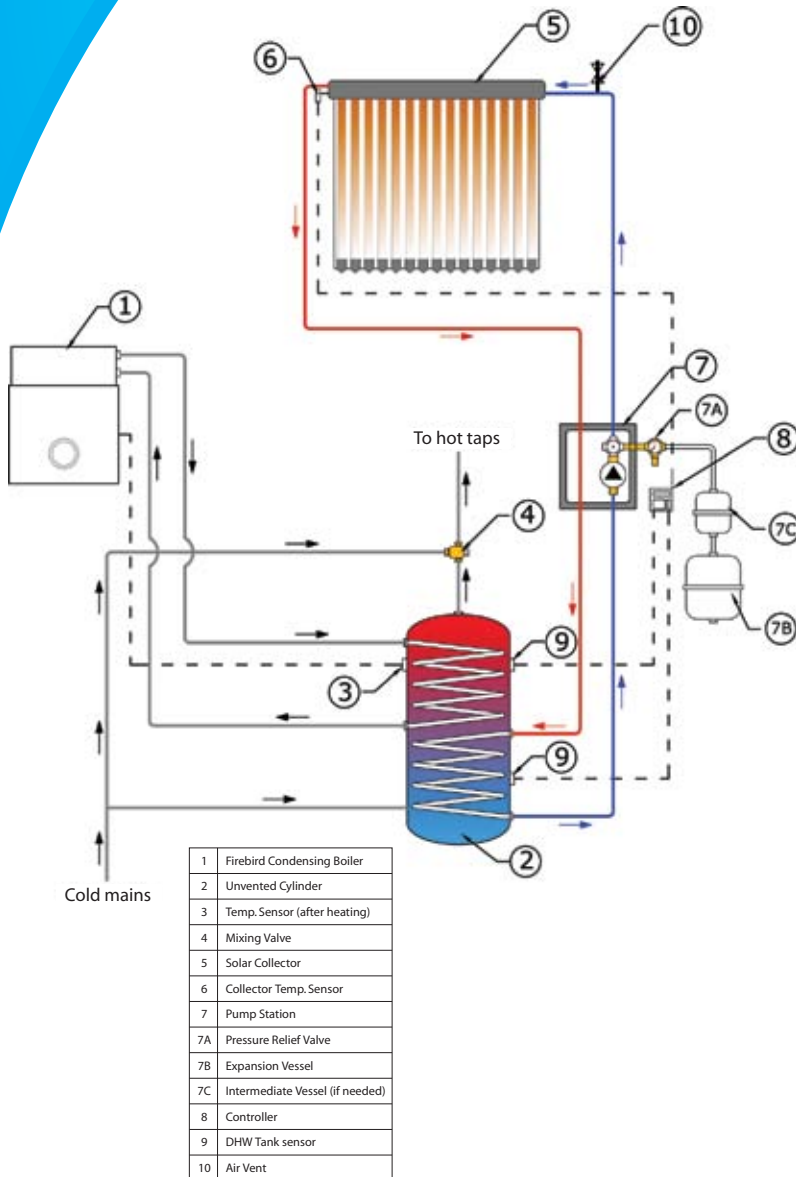

You can benefit from solar energy anywhere in Ireland and in the U.K. However, the further south you live, the more powerful the sun. Local factors will also have an effect on the radiation, including pollution free skies, local weather variations and the orientation of your roof.

It must be stressed though, that everyone can benefit from solar power. Contact our technical design department for your solar thermal system.

Solar System Design & Sizing

The main components of a domestic hot water solar system are the solar collectors, water storage tank, solar controller and solar pumping station. The diagram here below shows a basic concept layout of a solar thermal system.

When designing a solar system, it is imperative that the system is sized correctly; otherwise inadequate performance or overheating may occur. The following is the generally accepted best practice for sizing a solar system for the Irish and the U.K. climate.

Step 1 - Calculate hot water usage

Generally speaking the average daily hot water usage is between 35-65 litres per person. When sizing solar systems, 50 litres is a guidance figure.

Step 2 - Determine location of collectors

Ideally, collectors should be orientated due south if possible and at a pitch of between 30° and 50°.

Variations to the optimum positions are permissible and the chart on the right shows the % reduction in solar energy captured.

For example collectors facing due east at a 30° inclination will capture 80% of the maximum potential energy.

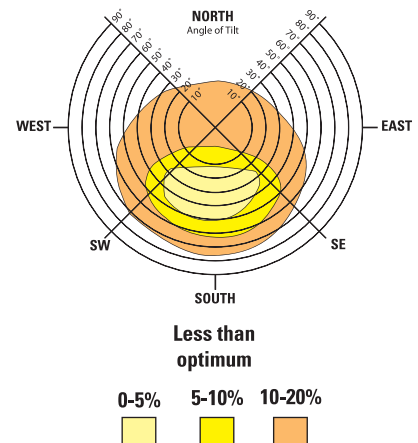

Step 3 - Determine storage tank size

The storage volume typically required for domestic solar systems should be equal to twice the daily hot water demand. A general recommendation is to have 50 litres of water storage capacity for every m² of collector aperture area. Recommended tank sizes for Firebird solar collectors are shown in the table below.

Step 4 - Calculate collector area required

A solar system should be designed so as to almost completely cover the hot water requirements during the summer months. As a rule of thumb, approximately 1 m² of collector aperture area is required per person.

Note, if the collectors can not be installed to optimum conditions, the correction factors in the chart below should be applied, i.e. if the collectors are facing due east at a 30° inclination, then 1 m² is multiplied by 120% = 1.2 m².

No. of Persons	No. of collectors	Tank Size (l)
2-4	2 x CPK7210-N Flat Panel collectors 2 x CVSKC-10 Vacuum Tube collectors 30 - 40 TZ58-1800 heat pipes	200
4-6	3 x CPK7210-N Flat Panel collectors 3 x CVSKC-10 Vacuum Tube collectors 40 - 60 TZ58-1800 heat pipes	300

Guide to Solar Thermal Systems available from Firebird.

Solar Collectors

Firebird offer three collector types to ensure that customers can choose the right collector to suit their installation requirements and budget.

CPK7210-N Flat Panel Collector

Firebird's CPK7210-N Flat Plate Collector is one of the most efficient collectors in the world, with an optical efficiency of 81.8%. One of the unique features of the CPK7210-N is that the collector base is extruded from a single aluminium sheet thus removing the need for welds, joints or glueing at the corners.

Other features:

- Glass is a special tempered solar glass.
- Absorber is constructed from a single sheet of Tinnox™ selective absorber coating.
- Heat transfer pipes behind the absorber are ultrasonically welded along the entire length to ensure optimal heat transfer.
- 50mm of mineral wool insulation.
- Professional finish.

Sales Code SOL100FPC

TZ58-1800 Heat Pipe Solar Collector

The TZ58-1800 Heat Pipe Solar Collectors offer an optimum performance to price ratio. The tubes are highly efficient due to a round shaped absorber design so that they capture the solar energy throughout the day.

Other features:

- High build quality - aluminium manifold design, nickel plated condenser head, borosilicate glass.
- Manifold can be installed initially and the tubes added later during commissioning (avoiding the lifting of heavy items onto the roof).
- Reinforced mounting kit manufactured to Firebird's specification.

Sales Code SOL820VTS - 20 Tube Set
SOL830VTS - 30 Tube Set

CVSKC-10 Vacuum Tube Collector

The CVSKC-10 Vacuum Tube Collector is a U-pipe direct flow evacuated tube, often referred to as a 'Sydney' tube. They are amongst the most efficient solar collector designs due to the CPC reflector aluminium plate placed behind the tubes. It reflects solar radiation back onto the absorber.

The CVSKC-10 collector offers optimum performance in terms of the installation footprint. Ten tubes have an incredible aperture area of 1.6m and with a height of only 1.64m, will fit on most restricted roof spaces.

Other features:

- Delivered assembled to cut down installation time.
- Co-axial glass tubes with excellent vacuum ~5 Pascals.
- Transfer manifold insulated with mineral wool insulation.
- Light weight construction for ease of handling.

Sales Code SOL150VTC

FIXING OPTIONS

PITCHED ROOF

All Firebird solar collectors can be installed on a normal slate or tiled roof using our weather-proof aluminium mounting frame kits. Mounting kits are constructed from robust materials and come with easy to follow instructions. Mounting kits for CPK7210-N Flat Plate collectors and CVSKC-10 Vacuum Tube collectors are available for double and single collector configurations. Mounting kits for TZ58-1800 Heat Pipe Solar collectors are supplied for sets of 20 and 30 tubes.

Sales Code	Description	
SOL101FMT	On-roof Mounting Kit	- 2 CPK7210-N Flat Plate collectors
SOL103FMT	On-roof Mounting Kit	- 1 extra CPK7210-N Flat Plate Collector
SOL151VMT	On-roof Mounting Kit	- 2 CVSKC-10 Vacuum Tube collectors
SOL153VMT	On-roof Mounting Kit	- 1 extra CVSKC-10 Vacuum Tube Collector
SOL822KIT	On-roof Mounting Kit	- 20 TZ58-1800 Heat Pipe Solar Collector
SOL832KIT	On-roof Mounting Kit	- 30 TZ58-1800 Heat Pipe Solar Collector

IN-ROOF

An in-roof installation kit is available for CPK7210-N Flat Plate collectors. Note that in-roof installation is not possible with CVSKC-10 Vacuum Tube collectors or TZ58-1800 Heat Pipe Solar collectors. With an in-roof kit the collectors are set lower on the roof giving a more aesthetically pleasing finish. Our in-roof kit comes with side, top and bottom flashings, collector mounting rails, coach bolts, rubber seals and installation instructions. Available in double and single collector configurations - for tiled and slate roof constructions.

Sales Code	Description	
SOL511TRF	In-Roof Mounting Kit Tile Roof	- 2 CPK7210-N Flat Plate collectors
SOL512TRF	In-Roof Mounting Kit Tile Roof	- 1 extra CPK7210-N Flat Plate Collector
SOL513SRS	In-Roof Mounting Kit Slate Roof	- 1 extra CPK7210-N Flat Plate Collector

FLAT ROOF INSTALLATION

If solar collectors have to be installed on a flat roof or surface, then a flat roof mounting kit is required. Flat roof kits are available for all collectors and come with mounting frame, coach bolts, rubber seals and installation instructions. Available in double and single collector configurations.

Sales Code	Description	
SOL102FMT	Flat Roof Kit	- 2 CPK7210-N Flat Plate collectors
SOL104FMT	Flat Roof Kit	- 1 extra CPK7210-N Flat Plate Collector
SOL152VMT	Flat Roof Kit	- 2 CVSKC-10 Vacuum Tube collectors
SOL154VMT	Flat Roof Kit	- 1 extra CVSKC-10 Vacuum Tube Collector
SOL174FRK	Flat Roof Kit	- 20 TZ58-1800 Heat Pipe Solar Collector
SOL172FRK	Flat Roof Kit	- 30 TZ58-1800 Heat Pipe Solar Collector

SOLAR CONTROLLERS & PUMP STATIONS

CONTROLLER

The Firebird solar controller ensures the efficient operation of the solar system, managing the efficient transfer of the solar energy from the collectors to the water storage tank. The controller is easy to use and displays key system data at the touch of a button, i.e.:

- Collector temperature.
- Upper and lower tank temperatures.
- Activation of solar circulating pump.
- Hours of operation.
- Alternative arrangement layouts.
- Pump speed efficiency.
- Emergency safety shut off.
- Additional anti-freeze functions.
- Easy to use holiday function.
- Anti-legionella control.

In addition the controller has a second available relay that facilitates features such as:

- Back-up heat source available for central heating or immersion connection.
- Timer set up for back up heat source heating.
- Surplus energy usage.

PUMP STATION

The Firebird solar pump station houses the key plumbing components for a solar system including solar circulating pump, non return gravitational valves, flow rate regulator, pressure relief valve, connection for expansion vessel as well as filling points.

Sales Code	Description
SOL414CTR	Deltasol BS4 Controller & Twin Pump Station

EAST / WEST CONTROLLER & PUMP STATION

For East / West installations, a special controller (BS4 Plus) is required along with an extra single line pump station to cater for the additional collector array.

Sales Code	Description
SOL424CTR	Deltasol BS4 Plus Controller, Twin Pump Station & Single

WATER STORAGE TANKS

The solar twin coil tank is used to store hot water heated by the solar system. The tank has two internal coils, the solar circuit provides heat through the lower coil while the back-up heating system (boiler) will heat the hot water via the upper coil.

Firebird water storage tanks are built from premium quality stainless steel and include an electric immersion as standard.

Sales Code	Description
SOL215TNK	Twin Coil Solar Tank, 215 litres
SOL305TNK	Twin Coil Solar Tank, 305 litres
SOL305TCT	Triple Coil Solar Tank, 305 litres

OTHER SYSTEM COMPONENTS

THE FOLLOWING COMPONENTS MAY BE SUPPLIED AS STANDARD ON CERTAIN SOLAR SYSTEM KITS

EXPANSION VESSELS

An expansion vessel is necessary to absorb the expansion of the solar fluid when high temperatures are reached in the solar collector. Currently available sizes are 24 and 35 litres.

Sales Code	Description
SOL502EXP	24 litre Expansion Vessel
SOL503EXP	35 litre Expansion Vessel

SOLAR ANTI-FREEZE

The heat transfer fluid used in a solar circuit is normally a mixture of water and a polypropylene glycol anti-freeze. The glycol anti-freeze also contains an additive to protect against corrosion and evaporates at higher temperatures than water to allow higher system temperatures. Firebird recommends a 40% glycol to 60% water mix to ensure frost protection to circa -25°C.

Sales Code	Description
SOL506FFL	Tyfocor L Anti-freeze for CPK7210-N Flat Plate Collector
SOL507VFL	Tyfocor LS Anti-freeze for Tube System

INTERMEDIARY VESSELS

Sales Code	Description
SOL005EXP	Intermediary Vessel - 5 litre
SOL012EXP	Intermediary Vessel - 12 litre

ANTI-SCALD MIXING VALVE

Anti-scald (mixing) valve must be fitted close to the hot water outlet of the solar tank so that delivery to the taps does not exceed 48°C.

Sales Code	Description
SOL504MIX	Anti-scald Mixing Valve

ACCESSORY KIT - EXPANSION VESSEL

Expansion vessel accessory kit includes check valve, wall bracket and 1 flexi hose.

Sales Code	Description
SOL521PPK	Expansion Vessel Accessory Kit

AIR VENT & ISOLATING VALVE

An automatic air vent should be fitted at the highest point in the solar circuit system in order to remove air from the system during commissioning. An isolating valve should be fitted before the air vent and isolated once the system has been commissioned.

Sales Code	Description
SOL530ASV	Air Vent & Isolating Valve

STAINLESS STEEL INSULATED TWIN PIPE

Flexible pre-insulated twin pipe with UV protection sheath for linking collectors to solar tank. Saves considerable installation time and money. (Fittings Included).

Sales Code	Description
SOL010TWP	Insulated Twin Pipe DIN16 – 10m
SOL015TWP	Insulated Twin Pipe DIN16 – 15m
SOL025TWP	Insulated Twin Pipe DIN16 – 25m

PIPE FLASHING

The pipe flashings provide a tidy solution for passing solar flow and return pipes through the house roof.

Sales Code	Description
SOL509TRF	Pipe flashing - tiled roof
SOL510SRF	Pipe flashing - slate roof
SOL524VTL	Glidevale G1 Vent Tile (BBA/IAB Approved)

FLEXI PIPES, 1M

High grade 1m stainless steel flexi pipes which can be connected to the flow and return side of the collector array. This saves the installer having to make complicated pipe bends through the roof of the house. Fittings can be included to connect the pipe to the different solar collector types.

Sales Code	Description
SOL402FPP	1m Flexi Pipe
SOL001ELB & SOL001FEM	Fittings for CPK7210-N Flat Plate Collector
SOL075ELB & SOL075TAP	Fittings for CVSKC-10 Vacuum Tube and TZ58-1800 Heat Pipe Solar collectors

ACCESSORIES

Sales Code	Description
SOL514FPC	Weather-proof Cover for CPK7210-N Flat Plate Collector
SOL515VTC	Weather-proof Cover for CVSKC-10 Vacuum Tube Collector
SOL000FPS	Solar Filling & Flushing Pump
SOL527RFR	Refractometer
SOL528CFL	Solar Cleaning Fluid, 500ml
SOL000BOV	Blow-off Storage Vessel
SOL010TSV	TSV Lightning Protection (for controller)
SOL526RLY	Auxiliary Relay HR230 (for controller)

Multifuel Backboiler and Dry Inset Stoves

Following on from the overwhelming success of our multifuel backboiler inset stove, we have now extended our range to include a multifuel dry inset stove.

Features

- 100% Irish.
- Designed to fit into a standard fireplace.
- Clean, easy operation.
- Solid multifuel options.
- Glass air wash design.
- Suitable for airtight dwellings* where underfloor, external air-in ducting is provided.
- HETAS approved.
- 16" and 18" models available.
- Easy to install.
- Flue adapter included free of charge.

Backboiler Inset Stove

- Up to 81.8% efficiency.
- Up to 12kW heat supplied to dwelling/radiators.

Dry Inset Stove

- Up to 75.6% efficiency.
- Up to 8.2kW heat supplied to space/room.

Specification

Backboiler Inset Stove	Product	Sales Code Matt	Sales Code Enamel	System Output	Room Output	Efficiency	No. of Standard Radiators	Height	Inset Width	Depth
	12kW	MAX016000	MAX016NML	8.3kW	3.6kW	80%	6	560	406-470	375
16kW	MAX018000	MAX018NML	12.1kW	3.6kW	81%	9	560	455-520	375	

Dry Inset Stove	Product	Sales Code	Room Output	Efficiency	Height	Inset Width	Depth
	6.9kW	MAX016DRY	6.9kW	74.4%	560	406-470	375
8.2kW	MAX018DRY	8.2kW	75.6%	560	455-520	375	

* Room seal kit available
 - 16" - ACC016RSK
 - 18" - ACC018RSK.

Note: The outline is similar for both the backboiler and the dry inset stove. The dimensions for the sockets are not relevant to the dry stove. All dimensions are relevant to stove/boiler section. Outer face framework is not taken into account. Dimensions are measured from pipe socket to socket, ie. 16" from outer pipe connection to outer pipe connection.

Dimensions (mm)

Backboilers

Challenger Backboiler

The Challenger backboiler is extremely efficient due to three unique design features:

- Simplified straight-through flue-ways. The tapered shape is designed to extend the flame to cover the complete heat exchanger surfaces (see diagram).
- Top water tube. This heating tube, positioned horizontally above flue-ways, collects much of the heat which would otherwise be lost into the chimney.
- Dry-back, lift-off, radiant panel. Can rise to a higher temperature than the normal type cooled by water.

The Challenger backboiler can be easily cleaned by lifting off the radiant panel. This allows immediate access to the unique layout of flue-ways. Bearing in mind that 1.5mm soot reduces the efficiency by up to 25%.

The Challenger allows balanced performance via the dry-back radiant panel/damper. The panel can rise to a higher temperature than one cooled by water and the increased radiant heat minimises the drop in room-heating when the damper is opened to heat water/radiators.

Supreme Backboiler

Similar in design to the Challenger, the Supreme backboiler has a higher output due to the increased number of flueways.

Wood Pellet Boiler

Firebird's wood pellet boiler represents the very latest in carbon neutral heating for use in domestic and light commercial applications.

Features

High efficiency

Firebird wood pellet boilers have efficiencies in the high 80's due to their highly efficient operation and well insulated boiler shell. The large chamber design ensures that the boiler does not clog up with ash.

Heating comfort

This wood pellet boiler is fully automatic in its operation. On start up, an electric heater ignites the pellets and the digital controller manages the entire operation. The boiler is fully modulating in that the feed rate of pellets is varied, depending on the boiler temperature and heating demand.

Ease of cleaning

All maintenance points are easily accessible and a set of cleaning tools and brushes are supplied. The burner is on a hinged door and can be opened by hand. The burner grate, which should be cleaned weekly, is fully retractable.

Automated control

The digital controller located at the top of the boiler is designed to be user friendly. The main boiler functions can be controlled from here and key system parameters entered.

Fuel

Only certified wood pellets approved to EN14961 may be burned in the Firebird wood pellet boilers. The below fuel characteristics must be adhered to.

- calorific value > 5 kW/kg (18 MJ/kg)
- diameter = 6 mm • max. length = 35 mm
- max. humidity = 8% • max. dust = 0,5%

Flue

Ensuring the correct size flue is critical to the operation of any biomass boiler. The chart on the right outlines the minimum flue diameter and height required for the different boiler outputs.

Technical Data

Model		25	35
Rated thermal output	(kW)	25	35
Boiler water content	(litres)	90	101
Boiler weight	(kg)	435	475
Flue diameter	(mm)	150	160
Power supply		230 V AC / 50Hz	

Outer dimensions (boiler & tank)			
Height	(mm)	1545	1545
Depth	(mm)	1055	1055
Width	(mm)	1201	1301

Sales Code	25	35
Wood Pellet Boiler	FWP025NKT	FWP035NKT
Wood Pellet Flue Kit	FWP025FLU	FWP035FLU
Wood Pellet Auger & Hopper	FWP000FED	FWP000FED

Wood Gasification Boiler

The Firebird wood gasification boiler represents the very latest in high efficiency wood burning.

Gasification is achieved in wood burning when gases released from the combusting wood are mixed with a regulated supply of oxygen to create a complete oxidation process. This results in extremely high combustion efficiencies and minimal ash waste.

Wood gasification boilers can only be used to burn split logs or wood briquettes. Coal, peat, refuse, etc. can not be used in these boilers. The best woods are hard woods like Ash, Oak & Beech (moisture content must be 20% or less).

System layout

A suggested schematic diagram for a wood gasification boiler can be seen below. For an unvented (pressurised) system, a thermal safety valve must be installed.

- | | |
|----------------------------------|--------------------------|
| 1 - Wood Gasification Boiler | 5 - Boiler Pump |
| 2 - Accumulation Tank | 6 - Circulation Pump |
| 3 - Three Way Thermostatic Valve | 7 - Thermal Safety Valve |
| 4 - Expansion Vessel | |

Accumulation Tank

An accumulation tank must be used in conjunction with the Firebird wood gasification boiler. The recommended sizing is a minimum 50 litres of water storage for every 1 kW of rated output. Firebird recommend a 2,000 litre tank.

Flue

Having the right draft and flue construction is critical to the operation of the wood gasification boiler. Flue height must be according to the chart (on right).

Technical Data

Model		35
Rated thermal output	(kW)	35
Boiler water content	(litres)	96
Boiler weight	(kg)	515
Max. volume of wood	(litres)	132
Max. length of the log	(mm)	540
Flue diameter	(mm)	200
Depth	(mm)	1235
Height	(mm)	1300
Width	(mm)	685
Min. accumulator tank	(litres)	1750

Sales Code

WGB000TSV	Thermal Safety Valve

Warranty

Complete After-Sales Service

Firebird has always provided their customers with the highest levels of after sales care. All products are supported by a nationwide network of independent service engineers who are regularly trained on our appliances.

Boiler Passport

An OFTEC co-ordinated "Boiler Passport" booklet is included with every oil boiler shipped from our factory. This passport will stay with the boiler, much like a car's service log book. The commissioning certificate page is on multipart carbon paper and one copy must be completed by an OFTEC registered or competent, qualified engineer and returned to Firebird in the enclosed prepaid envelope within 10 days of commissioning.

Our Warranty Policy

OIL FIRED BOILERS

Firebird offers a 5 year warranty on the boiler shell and a 2 year warranty on all other parts from date of installation, provided installation has occurred within 12 months from date of purchase. The 5 year boiler shell warranty consists of labour and parts for the first 3 years and parts only in years 4 and 5. The warranty is conditional on the boiler being commissioned and operated correctly. To validate your warranty, Firebird require that the commissioning certificate page in the Boiler Passport is completed by an OFTEC registered or competent, qualified engineer and returned to Firebird within 28 days of installation and commissioning.

SOLAR

Firebird offers 5 years warranty on all solar collectors and 2 years warranty on all other parts from date of installation, provided installation has occurred within 12 months from date of purchase.

INSET STOVES

Firebird offers a 5 year warranty on the inset stove shell and a 2 year warranty on other parts from date of installation, provided installation has occurred within 12 months from date of purchase. The 5 year inset stove shell warranty consists of labour and parts for the first 3 years and parts only in years 4 and 5. The warranty is conditional on the stove being commissioned and operated correctly. To validate your warranty, Firebird require that the warranty registration form (at the back of the instruction manual) is completed by a competent, qualified engineer and returned to Firebird within 28 days of installation and commissioning.

BIOMASS BOILERS

Firebird offers 5 years warranty on the boiler shell and 2 years warranty on all other parts from date of installation, provided installation has occurred within 12 months from date of purchase.

REDUCE YOUR HEATING BILLS?

FIREBIRD HAS YOUR HEATING SOLUTION

Energy Saving Heating Solutions

1 Enviromax Condensing Boilers

- Band A. • Biofuel compliant.
- Various models to choose from.
- Indoor & outdoor.
- **SAVE UP TO 25% ANNUALLY**

2 EnviroSol Solar Thermal Systems

Solar energy is free and can deliver up to 70% of all hot water requirements. We have three models to choose from:

- CPK-7210N Flat Panel Collector.
- TZ58-1800 Heat Pipe Solar Collector.
- CVSKC-10 Vacuum Tube Collector.

Excelsior Twin Coil Tank - 215 Litre Tank / 305 Litre Tank

3 Oil Fired and Multifuel Range Cookers

- Central heating and room only models.
- Large main oven with even heat distribution.
- SEDBUK band A internal condensing boiler.

4 Biomass Range

- Wood Pellet Boiler.
- Wood Gasification Boiler.

5 Multifuel Backboiler and Dry Inset Stoves

- Highly efficient (up to 81% with backboiler and 75.6% for dry stove).
- Designed to fit into standard fireplace. • Solid multifuel options.
- 12kW - 16kW and 6.9kW - 8.2kW. • Glass air wash design.
- Solid Fuel Heat Exchanger to link your stove into a pressurised heating system.
