Solar thermal applications

DRAINBACK SYSTEM

State Water Heaters supplies a complete package of solar components, one of which is an ingenious drainback system. This drainback system boosts the lifetime of the system by preventing stagnation temperatures from arising in the installation. Ideal for schools and colleges, and commercial buildings that are closed during weekends.

INTELLIGENT CONTROLLER

The intelligent State Water Heaters computer-controlled operating system ensures maximum efficiency and maximum solar contribution. In addition, this system is particularly user-friendly: all essential information can be programmed and viewed via a single display unit.

INSTALLATION POSSIBILITIES

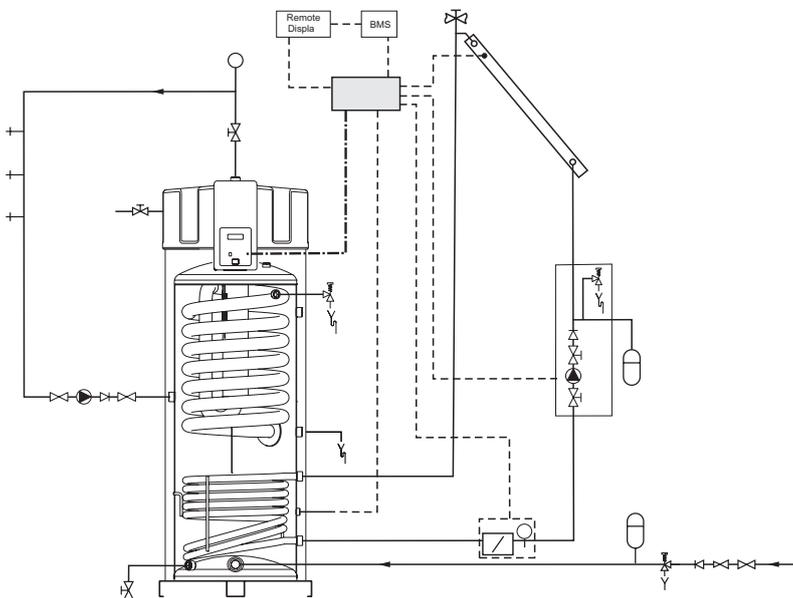

State Water Heaters solar systems are available for use as "built on roof", "built into roof" or on 'A' frames for flat roofs. Delivery as a complete package makes installation of the system extremely simple.

OPTIMUM SOLAR CONTRIBUTION

The SSC is a compact installation with integrated solar heat exchanger. Apart from its excellent suitable size for restricted spaces, the SSC is also a very efficient appliance. The collectors are connected to the lower heat exchanger, and the heat is transferred from the collectors to the water. The upper heat exchanger afterheats, if necessary, to the setpoint.

The SSG is installed in combination with an SIT storage tank with integrated heat exchanger. The collectors are connected to the heat exchanger and the available heat is transferred to the preheat tank. If the temperature of the water in the SSG differs more than 5 degrees from the water in the SIT, the heat transfer from the SIT to the SSG starts up. If necessary, the SSG heats the water to draw-off temperature.

In both installations the solar contribution is fully utilised. If a higher draw-off temperature is required than can be provided by solar contribution, only then additional gas heating is needed. This functionality delivers the optimum use of solar energy and a minimum use of gas.

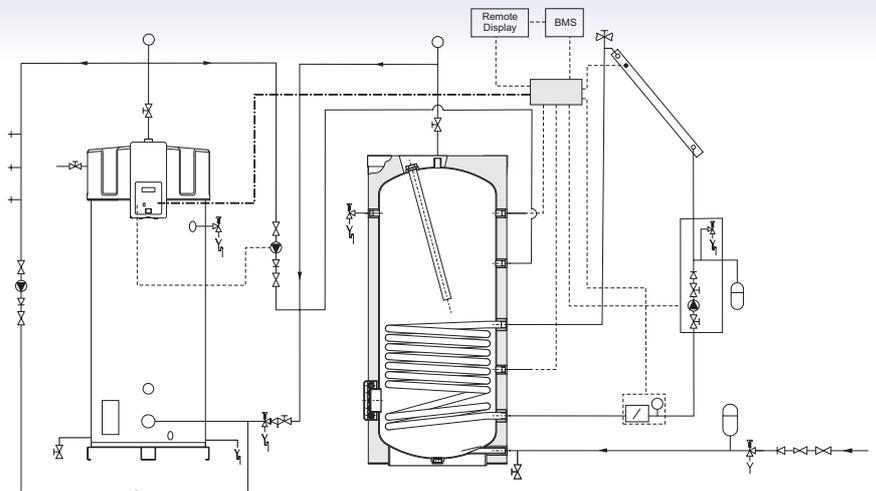

SSC

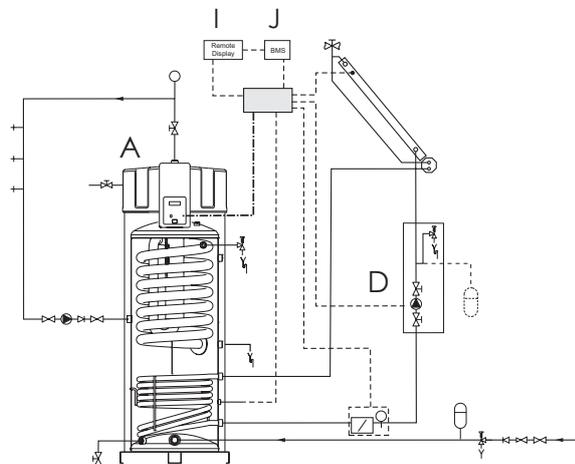

The solar hot water system solution in a compact format, suitable for connecting up to 15 collectors. The condensing technology used in the 40 kW and 60 kW water heaters guarantees high user comfort and maximum solar contribution (one controller for the complete installation). The SSC can be installed in vented and unvented systems.

SSG+SIT

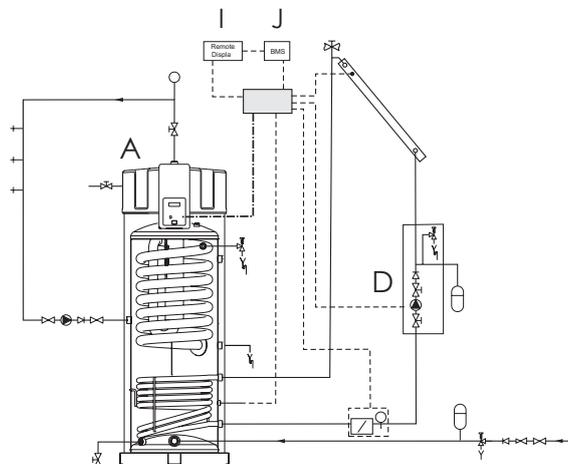

The solar heating system solution for larger applications for solar installations, suitable for connecting up to 15 collectors. Comfort and maximum solar contribution are guaranteed by adding condensing support from 28 kW to 120 kW in combination with storage tanks from 300 to 3000 litres. The SSG can be installed in vented and unvented systems.

Solar systems

Also applicable as vented installation

Also applicable as vented installation

SSC SOLAR SYSTEM WITH DRAINBACK

- SSC HE condensing gas solar water heater with integrated heat exchanger
- SSC available in 42 and 60 kW version with a capacity of 370 litre
- Compact installation
- Combined with the correct pump station several numbers of collectors possible
- Drain back system prevents the installation from reaching stagnation temperatures

* If you use a large pump station, always install an expansion vessel.

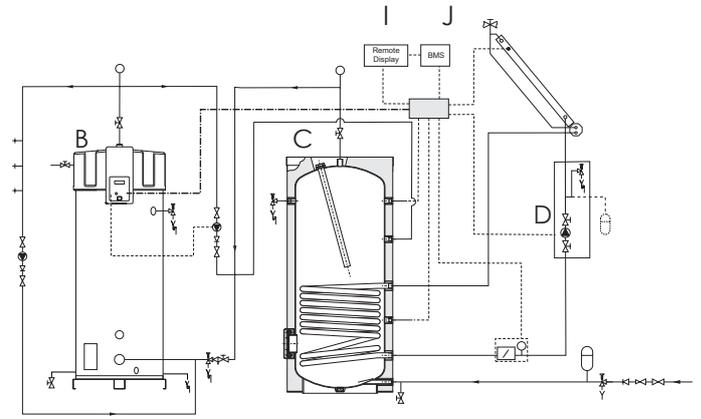

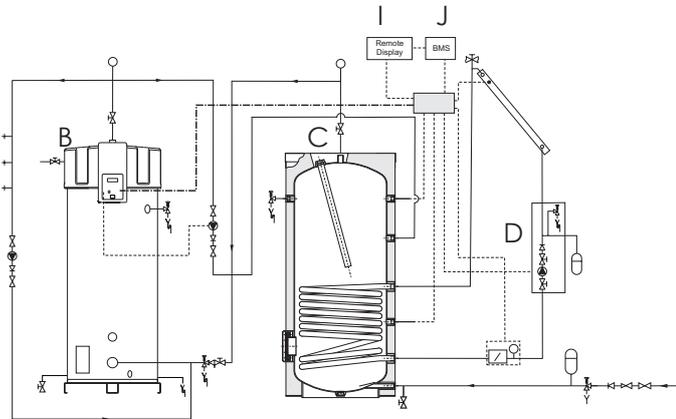

SSC SOLAR SYSTEM WITHOUT DRAINBACK

- SSC HE condensing gas solar water heater with integrated heat exchanger
- SSC available in 42 and 60 kW version with a capacity of 370 litre
- Compact installation
- Combined with the correct pump station several numbers of collectors possible
- Always use an expansion vessel in an installation without drain back system

Also applicable as vented installation

Also applicable as vented installation

SSG + SIT SOLAR SYSTEM WITH DRAINBACK

- SSG HE condensing gas solar water heater combined with an SIT with integrated heat exchanger
- SSG is available from 28 to 120 kW versions and with capacities from 217 to 480 litre
- Always used in combination with an SIT indirect tank available in capacities from 300 to 3000 litre (or large IT tanks up to 3000 litres)
- Combined with the correct pump station several numbers of collectors possible
- Drain back system prevents the installation from reaching stagnation temperatures
- Up to 40% extra solar contribution possible, compared to standard systems

* If you use a large pump station, always install an expansion vessel.

SSG + SIT SOLAR SYSTEM WITHOUT DRAINBACK

- SSG HE condensing gas solar water heater combined with an SIT with integrated heat exchanger
- SSG is available from 28 to 120 kW versions and with capacities from 217 to 480 litre
- Always used in combination with an SIT indirect tank available in capacities from 300 to 3000 litre
- Combined with the correct pump station several numbers of collectors possible
- Always use an expansion vessel in an installation without drain back system
- Up to 40% extra solar contribution possible, compared to standard systems

SSC

Condensing gas-solar water heater

The SSC range gas-solar water heaters provides hot water in a very efficient way. This water heater is equipped with an automatic gas/air premix burning system. The integrated intelligent solar controller guarantees maximum solar contribution. Thanks to the integrated heat exchanger, the SSC has a very small footprint.

- Fully room-sealed condensing high efficiency gas-solar water heater with integrated solar heat exchanger
- Max. solar contribution through integrated intelligent solar controller
- Automatic gas/air premix burning system including burner modulation
- Low-maintenance inert anodes
- Efficiency 96% (gross)
- NOx emission ≤ 30 ppm (dry – air free) – NOx class 5
- Quiet operation < 45 dB(A)
- 1 control and display unit for the complete installation
- Programmable for legionella purge cycle
- Very small footprint because of integrated solar heat exchanger
- Temperature setting from 40°C to 80°C with use of week timer

SSG

Condensing high efficiency gas-solar water heater

The SSG range of gas-solar water heaters consists of 7 appliances from 31.0 to 121.8 kW nominal output. A SSG should always be installed with an SIT indirect tank with heat exchanger. These appliances combined can deliver an installation suitable for large industrial applications. The entire installation is controlled through the intelligent solar control.

- Always installed in combination with an indirect tank with integrated heat exchanger
- Max. solar contribution through integrated intelligent solar controller
- Automatic gas/air premix burning system including burner modulation
- Low-maintenance inert anodes
- Efficiency 97% (gross)
- NOx emission ≤ 30 ppm (dry – air free) – NOx class 5
- Quiet operation <45 dB(A)
- 1 control and display unit for the entire installation
- Programmable for legionella purge cycle
- Temperature setting from 40°C to 80°C with use of week timer

SIT

Commercial indirect tanks

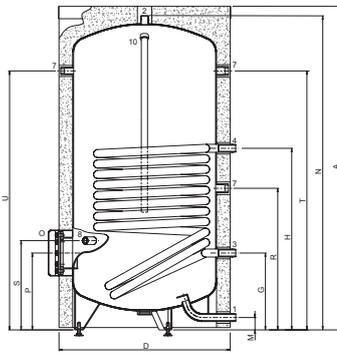

SIT range of commercial indirect storage tanks are suitable for installations with a variety of heat sources. The units are manufactured with heavy gauge steel and protected from corrosion by an advanced glass lining process. Storage capacities range from up to 2800 litres with heating outputs from 46 - 142 kW.

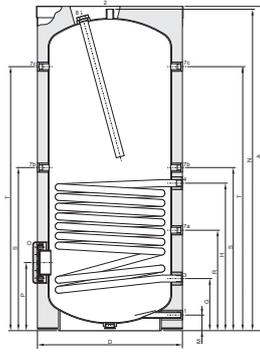

- Glass lined steel tank
- Coil surface area (1.5 - 4.8 m²)
- Electrolytic protection - magnesium anode
- Removable polyurethane soft foam insulation jacket
- Clean out inspection port
- Maximum tank working pressure 10 Bar
- Tank operation temperatures up to 95°C
- Coil operation temperature up to 110°C
- Suitable for vented (open) or unvented (sealed) systems

Optional accessories

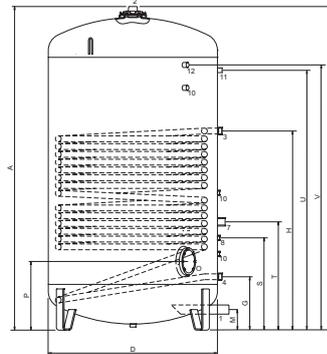

- Temperature meter
- Unvented system kit
- Temperature & pressure relief valve
- Electric heating elements up to 7.5 kW
- Flexible magnesium anode
- Powered anodes

Components

D

LARGE PUMP STATION WITH DRAINBACK

- Always install with an expansion vessel

Art. No	0309977	0309981	0309985	0309989	0309993
---------	---------	---------	---------	---------	---------

D

LARGE PUMP STATION WITHOUT DRAINBACK

- Always install with an expansion vessel

Art. No	0309978	0309982	0309986	0309990	0309994
---------	---------	---------	---------	---------	---------

D

PUMP STATION

- Pump station module with integrated pump
- Suitable for installations up to 15 solar collectors
- Integrated flow meter and overpressure protection
- Larger pumps available for bigger installations

Art. No	0311590	0311591	0311588	0311589
Collectors	1-7	8-15	1-7	8-15
Drainback	yes	yes	no	no

E

EXPANSION VESSEL

- Expansion vessel suitable for high temperatures, specifically for solar systems
 - Capacity of 25 to 80 litres, depending on the number of solar collectors used
 - * The expansion vessel is based on the number of collectors.
- For more information please contact the Technical Support Group.

Art. No	0308875	0308876	0308877	0308878
Litre	25	35	50	80
Collectors	1-4	5-6	7-11	12-15

F

GLYCOL

- Corrosion inhibiting and anti-frost agent Tyfocor L[®]
- Suitable for use in systems with and without drainback system
- Packaging of 10 litres, in 40% mixed solution

Art. No	0308803
Litre	10

I

REMOTE DISPLAY

Art. No	0309999(S)

Solar thermal energy

DRAINBACK SYSTEM

State Water Heaters supplies a complete package of solar components, one of which is an ingenious drainback system. This drainback system boosts the lifetime of the system by preventing stagnation temperatures from arising in the installation. Ideal for schools and colleges, and commercial buildings that are closed during weekends.

CONTROL

The control unit has a modulating pump control. And it gives the possibility to measure the solar contribution and display this information.

SMART DISPLAY

The temperature in the collector, the temperature of the stored water and the solar contribution can be read on the display which is available as an accessory.

Solar thermal energy

Indirect solar water heating

These solar water heating systems consist of an indirect tank which is connected to a boiler (electric, gas or oil) or water heater. The optimum installation can be constructed by using different accessories. The SIT as well as the SID can be part of a solar water heating system. Both can be installed with or without a drain back system.

Heat exchanger

The SIT and SID heat exchangers provide the heat exchange of the collected solar heat to the hot water volume. The SID has two heat exchangers, allowing the connected boiler or water heater to deliver its heat to the SID. This leads to a maximum comfort.

Controller

The pump station module controls of the indirect solar water heating system are done by the pump station module. This is a standard control. The pump is activated as a result of the temperature in the collector and the storage vessel. All essential information can be viewed on the control display.

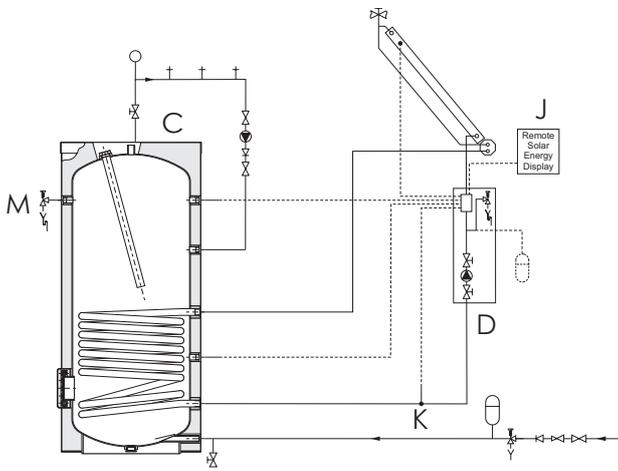

Composing systems

Selecting a pump station is determined by the number of collectors and the length of piping. State Water Heaters offers regular and extra large pump stations. Depending on the system, the pump stations are delivered with or without check valves depending on whether the system has drain back.

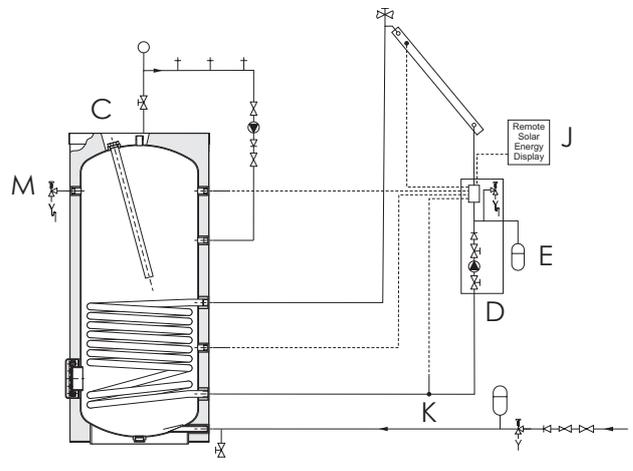

To help you select the perfect indirect solar installation - either with or without drain back system - you will find a summary on the next pages. The drain back system enhances the lifetime of the system by preventing stagnation temperatures from arising in the installation. The installation drawings show a table with the required components. Each component corresponds to a letter which is explained on the following pages. Accessories - without referral - are explained as well.

Solar systems

Also applicable as vented installation

Also applicable as vented installation

SIT INDIRECT SOLAR SYSTEM WITH DRAINBACK

- Solar system connected to existing central heating system or boiler
- SIT indirect tank with 1 heat exchanger available in capacities from 300 to 3000 litre
- Combined with the correct pump station several numbers of collectors possible
- Drain back system prevents stagnation temperatures in the installation

* If you use a large pump station, always install an expansion vessel.

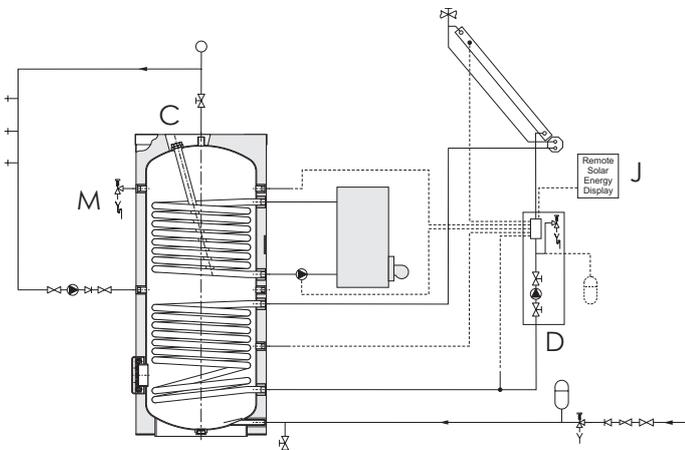

SIT INDIRECT SOLAR SYSTEM WITHOUT DRAINBACK

- Solar system connected to existing central heating system or boiler
- SIT indirect tank with 1 heat exchanger available in capacities from 300 to 3000 litre
- Combined with the correct pump station several numbers of collectors possible
- Always use an expansion vessel in an installation without drain back system

System components (A to L) can be found on the following pages.

Also applicable as vented installation

Also applicable as vented installation

SID INDIRECT SOLAR SYSTEM WITH DRAINBACK

- Solar system connected to existing central heating system or boiler
- SID indirect tank with 2 heat exchangers available in capacities from 289 to 1007 litre
- Combined with the correct pump station several numbers of collectors possible
- Drain back system prevents stagnation temperatures in the installation
- In an SID installation both the collector and boiler or water heater transfer their heat into one tank. This leads to a more comfortable installation compared to the SIT installation

* If you use a large pump station, always install an expansion vessel.

SID INDIRECT SOLAR SYSTEM WITHOUT DRAINBACK

- Solar system connected to existing central heating system or boiler
- SID indirect tank with 2 heat exchangers available in capacities from 289 to 1007 litre
- Combined with the correct pump station several numbers of collectors possible
- Always use an expansion vessel in an installation without drain back system
- In an SID installation both the collector and boiler or water heater transfer their heat into one tank. This leads to a more comfortable installation compared to the SIT installation

System components (A to L) can be found on the following pages.

SIT

Commercial indirect tanks

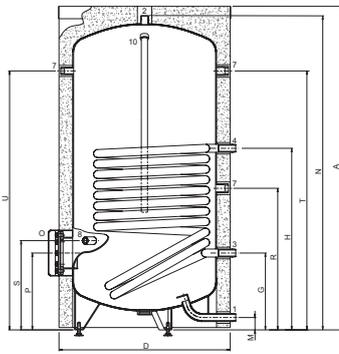

SIT range of commercial indirect storage tanks are suitable for installations with a variety of heat sources. The units are manufactured with heavy gauge steel and protected from corrosion by an advanced glass lining process. Storage capacities range from up to 2800 litres with heating outputs from 46 - 142 kW.

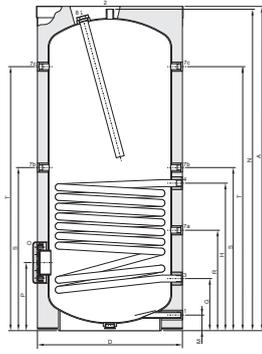

- Glass lined steel tank
- Coil surface area (1.5 - 4.8 m²)
- Electrolytic protection - magnesium anode
- Removable polyurethane soft foam insulation jacket
- Clean out inspection port
- Maximum tank working pressure 10 Bar
- Tank operation temperatures up to 95°C
- Coil operation temperature up to 110°C
- Suitable for vented (open) or unvented (sealed) systems

Optional accessories

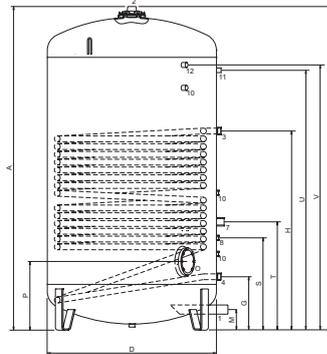

- Temperature meter
- Unvented system kit
- Temperature & pressure relief valve
- Electric heating elements up to 7.5 kW
- Flexible magnesium anode
- Powered anodes

SID

Commercial dual coil indirect tanks

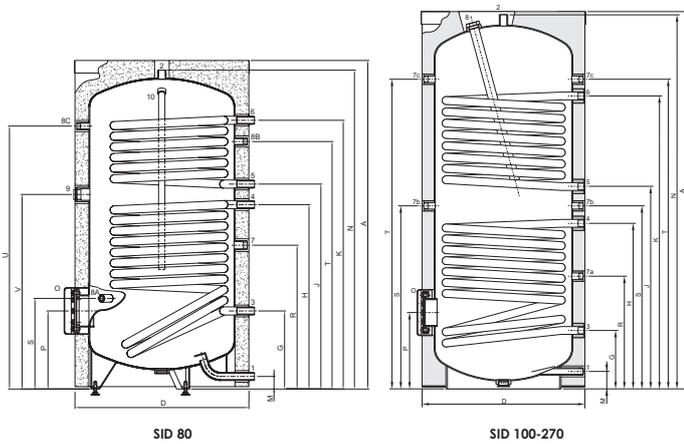

SID range of dual coil indirect storage tanks are suitable for installations with solar and other heat recovery systems. The units are manufactured with heavy gauge steel and protected from corrosion by an advanced glass lining process. The range includes a selection of 6 models with capacities from 289 to 1007 litres.

- Glass lined steel tank with two coils
- Output primary coil 27 - 58 kW
- Output secondary coil 46 - 87 kW
- Electrolytic protection - magnesium anode
- Removable polyurethane soft foam insulation jacket
- Clean out inspection port
- Maximum tank working pressure 10 Bar
- Tank operation temperatures up to 95°C
- Coil operation temperature up to 110°C
- Suitable for vented (open) or unvented (sealed) systems

Optional accessories

- Temperature meter
- Unvented system kit
- Temperature & pressure relief valve
- Electric heating elements up to 7.5 kW

EXPANSION VESSEL

- Expansion vessel suitable for high temperatures, specifically for solar systems
- Capacity of 25 to 80 litres, depending on the number of solar collectors used
- * The expansion vessel is based on the number of collectors.
For more information please contact the Technical Support Group.

Art. No	0308875	0308876	0308877	0308878
litre	25	35	50	80
Collectors	1-4	5-6	7-11	12-15

F

GLYCOL

- Corrosion inhibiting and anti-frost agent Tyfocor L®
- Suitable for use in systems with and without drainback system
- Packaging of 10 litres, in 40% mixed solution

Art. No	0308803
litre	10

J

SMART DISPLAY

- Displays the temperature in the collector and storage vessel
- Displays, if combined with an output sensor, the solar contribution

Art. No	0309701(S)
---------	------------

K

OUTPUT SENSOR

- Measures the temperature in the system incl. piping and visualizes the solar contribution through the smart display

Art. No	0309691(S)	0309701(S)
---------	------------	------------

Collectors

COLLECTOR + DRAINBACK

- Patented drainback system available as an accessory to prevent stagnation temperatures
- Approved by EN12975-2-2006, CE and Solar Keymark certified
- Temperature resistant up to 200°C
- Installation options: roof built on, roof built in, flat roof consoles mounting and wall consoles mounting
- Simple installation system for multiple panels
- The SPBO, SPBI and SPFR are available in horizontal or vertical
- Complete installation is delivered in 1 package including the assembly materials
- 10 years warranty

Thermal solar energy Collectors

Sustainability, efficiency and environmental-friendliness are the main focus of State Water Heaters's renewable product range, and especially our solar collectors. The hub of an State Water Heaters solar collector is a full-plate copper absorber with an eco-friendly vacuum coating. The guaranteed quality of the coating ensures an exceptionally long life of the collector, together with a glass seal, set in the frame to prevent the ingress of moisture and dirt into these high-performance collectors. Aluminium casing makes the solar collectors suitable for use in any environment.

Drain back system

To increase the life of the collectors and to prevent extremely high temperatures, an optional drain back module is available. By mounting the drain back module directly below the collectors, the required pump capacity is reduced and thus the power consumption of the fully modulating solar pump is reduced to an absolute minimum.

Mounting options

Our collectors are available in 4 variants: roof built-in, roof built-on, flat roof construction and wall mounting frames. The flat roof frame sets and the wall mounting frame sets are based on the angle of positioning. Depending on the roof and the relevant mounting technique, the flat roof frames are available with or without concrete blocks. All sets can be supplied with a drain back system.

State Water Heaters delivers the perfect solution for every location. State Water Heaters solar collectors are supplied in sets that include all necessary tools and parts. Our solar collectors meet the highest standards and are Solar Keymark certified, in full compliance with all major incentive and Tax credit schemes such as the Renewable Heat Incentive.

Custom solutions

State Water Heaters has an extensive range of collector sets. Yet we are also aware of each unique situation that arises when placing a solar system and collectors. Our goal is to optimise the benefits to the user from the solar system. This means we try to create an installation which meets all hot water requirements and at the same time is the best suited choice for the building.

In practice we try to arrange the best possible configuration for our products. Our Sales Engineers can help you create an optimal installation. Also, we can provide you with building special applications.

We can provide drawings for the positioning of the collectors on the roof, or provide you with a principle scheme of the application of the installation. We can even help you create the best possible frame construction for the collectors on the roof. State Water Heaters is your partner in creating the optimum solar installation for every application.

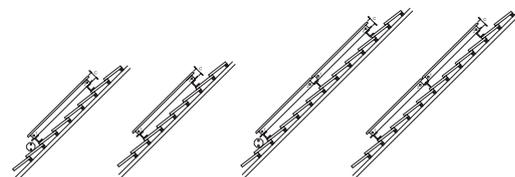

Collector sets

ROOF BUILT ON SETS

Roof built on sets are called SPBO. These sets are used for pitched roofs and are mounted on the tiles. The collector is placed in position by using file clips.

There are several installation options. The number of collectors; when sets are placed in a single row there is a maximum of 15 collectors, for a double row this is 14. All sets can be equipped with a drain back system, DB. Finally, there is the option of placing the collectors horizontally or vertically.

Selecting a collector set depends on the situation of the roof or walls and the necessary hot water capacity.

ROOF BUILT ON COLLECTORS

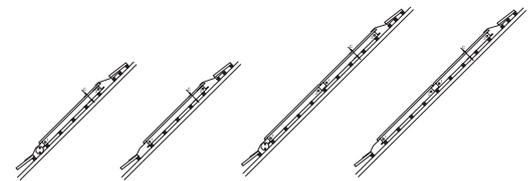

Type	Number of collectors	Number of rows	With drainback	Horizontal	Vertical
SPBO	1	1	DB	H	V
SPBO	2	1	DB	H	V
SPBO	3	1	DB	H	V
SPBO	4	1	DB	H	V

SPBO	12	2	DB	H	V
SPBO	14	2	DB	H	V

ROOF BUILT IN SETS

Roof built in sets are called SPBI. These sets are used for pitched roofs and are mounted in between the tiles.

There are several installation options. The number of collectors; when sets are placed in a single row there is a maximum of 15 collectors, for a double row this is 14. All sets can be equipped with a drain back system, DB. Finally, there is the option of placing the collectors horizontally or vertically.

Selecting a collector set depends on the situation of the roof or walls and the necessary hot water capacity.

SPBI	14	2	DB	H	V

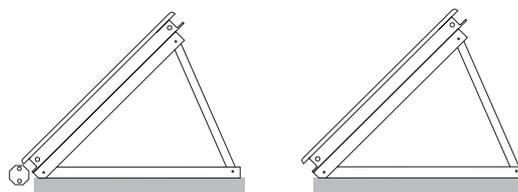

Collector sets

FLAT ROOF FRAME SETS

Flat roof frame sets are called SPFR. These sets are used for flat roofs and mounted using a frame.

There are several options for selecting a set. The number of sets may vary; the maximum per set is 15. There are two options for the angle of the frame: 20°/30° or 45°/60°. Both options indicate the range for placing the frame set. All sets can be equipped with a drain back system, DB. There is the option of placing the collectors horizontally or vertically. Finally, depending on the roof, the set is available with or without concrete blocks.

Selecting a collector set depends on the situation of the roof or walls and the necessary hot water capacity.

FLAT ROOF FRAME COLLECTORS

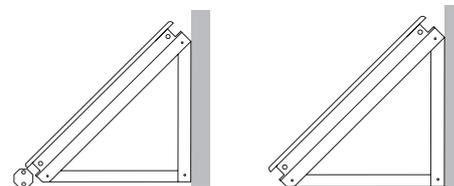

Type	Number of collectors	Angle	With drainback	Horizontal	Vertical	With concrete blocks
SPFR	1	20/30	DB	H	V	B
SPFR	2	20/30	DB	H	V	B
SPFR	3	20/30	DB	H	V	B
SPFR	4	20/30	DB	H	V	B
SPFR	5	20/30	DB	H	V	B
SPFR	6	20/30	DB	H	V	B

WALL HUNG CONSTRUCTION SETS

Wall hung construction sets are called SPWL. These sets are used for installing collectors on the outside wall of a building. The sets are mounted using a frame.

There are several options for selecting a set. The number of sets may vary; the maximum per set is 15. There are three options for the angle of the frame: 45°, 60° or 70°. All sets can be equipped with a drain back system, DB. These collectors can only be placed horizontally.

Selecting a collector set depends on the situation on the roof or walls and the necessary hot water capacity.

Gas-fired applications

SUF HEAT EXCHANGER

The unique design of the SUF heat exchanger ensures optimum condensing performance at almost all flow rates.

SXP FAN-BURNER

The gas/air mixture ratio is controlled to perfection by the compact SXP fan burner design. This raises the appliance's efficiency considerably.

ENERGY SAVINGS

When designing sanitary hot water installations, it is essential to achieve maximum energy savings. Indirect fired systems require high primary temperatures (as high as 90°C). The heat is then transferred to the sanitary water via a heat exchanger. These systems are characterised by a considerably higher gas consumption than the direct fired State Water Heaters systems.

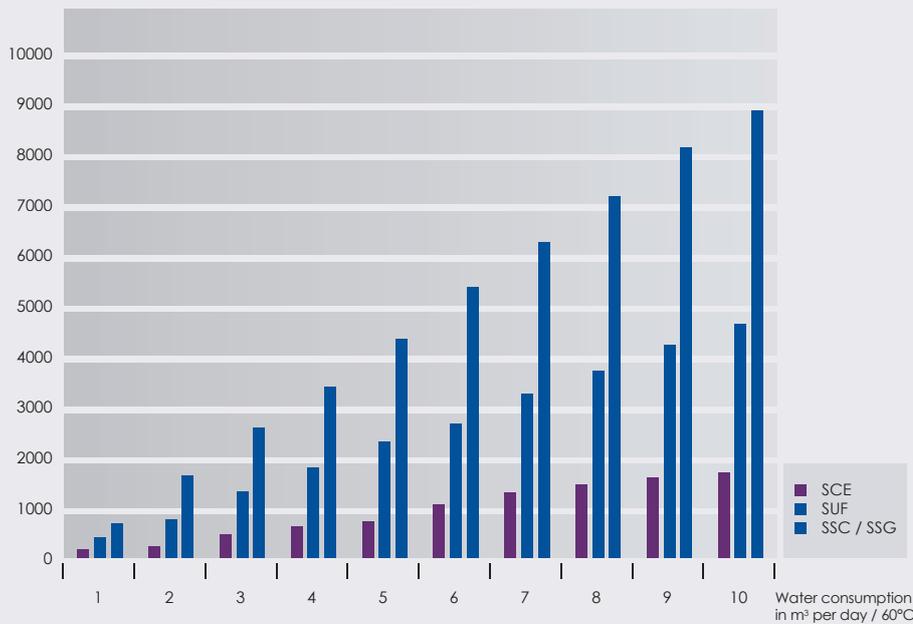

In State Water Heaters direct fired systems the heat is transferred directly through the bottom of the water tank of the water heater or via an integrated heat exchanger.

The graph below shows that gas savings can be as much as 50%. Thanks to the unique design of our heat exchangers and intelligent control modules, maximum efficiency is accomplished with minimum energy consumption.

State Water Heaters systems already fulfill the strictest requirements in the area of upcoming ErP Ecodesign regulations, and will be found in the categories with the highest possible energy labelling.

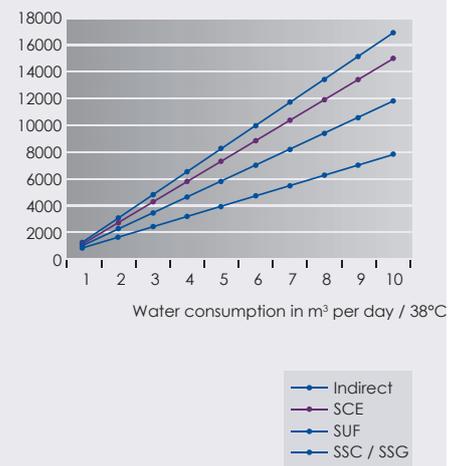

GAS SAVINGS DIRECT VERSUS INDIRECT FIRED SYSTEMS

Gas savings in m³ per year c.f. indirect fired system at a water temperature of 60°C

GAS CONSUMPTION IN M³ PER YEAR AT A WATER TEMPERATURE OF 38°C

Gas consumption in m³ per year

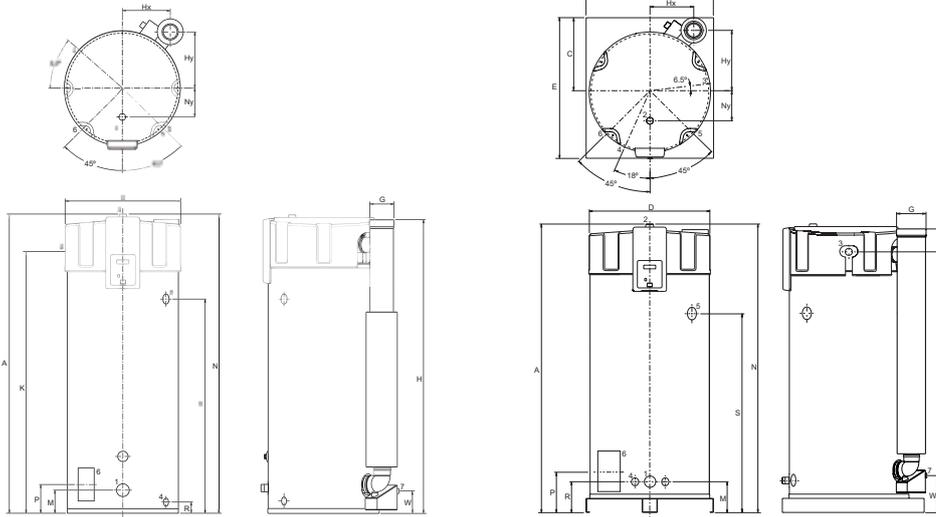

SUF

Commercial condensing high efficiency range

The SUF range direct-fired gas water heaters provide a new level of economy and efficiency in hot water production. All models are fully condensing and incorporate a burner modulation giving up to 97% thermal efficiency and are designed to operate as a room sealed system in both vented and unvented commercial / industrial applications. With vertical or horizontal concentric or parallel flue kits, up to 100 meter in length, the range is particularly useful where extensive conventional flues are either not possible or practical.

- Fully room-sealed condensing high-efficiency water heater 97% (gross)
- Automatic gas/air premix burning system including burner modulation
- Delivered with low-maintenance inert anodes
- NOx emission ≤ 30 ppm (dry – air free) – NOx class 5
- Quiet operation <45 dB(A)
- Temperature setting from 40°C to 80°C with use of week timer
- Flexible flue options, up to a 100 meters
- Easy fault diagnosis and computer controlled digital week timer
- Programmable for legionella purge cycle

SXP

Commercial condensing high efficiency range

The SXP range direct-fired gas water heaters provide a new level of economy and efficiency in hot water production. All models are fully condensing and incorporate a burner modulation giving up to 97% thermal efficiency and are designed to operate as a room sealed system in both vented and unvented commercial / industrial applications. With vertical or horizontal concentric or parallel flue kits of up to 100 meter in length, the range is particularly useful where extensive conventional flues are either not possible or practical.

- Fully room-sealed condensing high-efficiency water heater (95% gross)
- Stainless steel tank
- No anodes simplify maintenance
- Premix Low-NOx burner is environmentally friendly
- Quiet operation: specially designed blower and burner
- Plug-and-Play technology; connect air inlet, exhaust outlet, water, electricity, and gas, set the temperature and the system functions properly
- Easy to install because of the relatively low weight of the appliance (70/82 kg)
- Suitable for natural gas or propane
- Very suitable for agricultural applications
- Maximum temperature setting of 85°C

Multiflue SCE/SCT

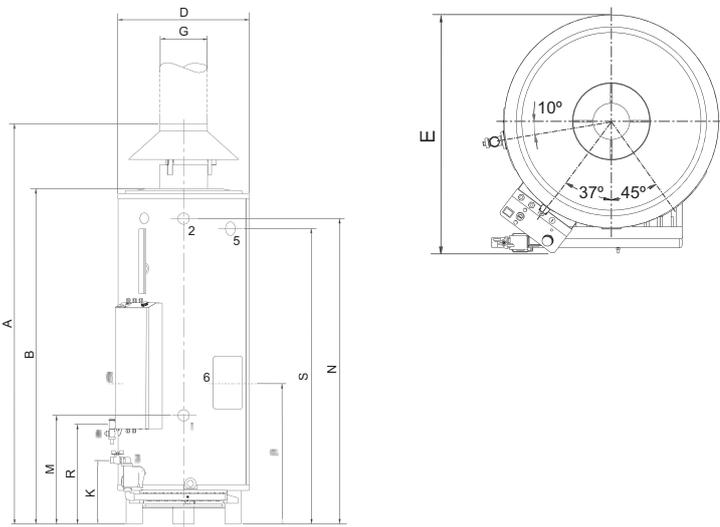

Commercial Sandblaster® range

Sandblaster® commercial direct fired water heaters offer a broad range of high output products for large volume applications. All models feature the new and improved Hydro Cannon self-cleaning technology that reduces sediment build-up inside the tank. The range includes 15 different models with inputs from 33.9 to 142.4 kW

- "Hydro Cannon™" self-cleaning device
- Stainless steel burners
- Automatic (SCE) or piezo ignition (SCT)
- Thermal reflux safety flue system (TRS)
- Multiple thermostat system - control, high limit & ECO
- Easy access to control panel
- Electrolytic protection - magnesium anodes
- Dual clean out inspection ports
- Voltage free contact (SCE models)
- Frost protection (SCE models)
- LPG conversion kit (SCE 65-500 purchased separately)
- Suitable for vented (open) or unvented (sealed) systems

Optional accessories

- Time clock control
- Powered anodes
- Unvented system kit
- External ON / OFF
- Universal draft diverter
- Temperature & pressure relief valve

Single flue SCE/SCT

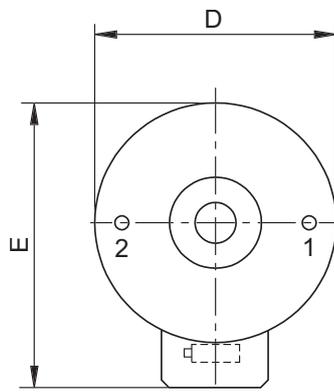

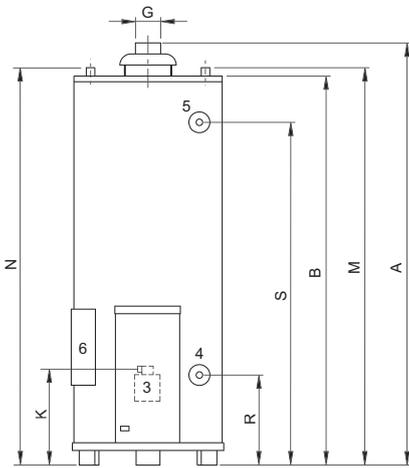

Light commercial range

SCE/SCT industrial gas fired storage water heaters are designed to provide large volumes of hot water for light commercial applications. The units are equipped with a high efficient burner and baffle design that insures fast recovery times and economical hot water production. The different models offer storage capacities from 265 to 355 litres with heat inputs up to 26.7 kW

- Multi port stainless steel burner
- Electronic spark (SCE) or piezo ignition (SCT)
- Control & high limit thermostats
- Thermal reflux safety flue system (TRS)
- Electrolytic protection – magnesium anode
- Clean out inspection port
- LPG conversion kit
- Suitable for vented (open) or unvented (sealed) systems

Optional accessories

- Unvented system kit
- Temperature & pressure relief valve
- Solenoid control kit (SCT)
- Powered anodes

SDV

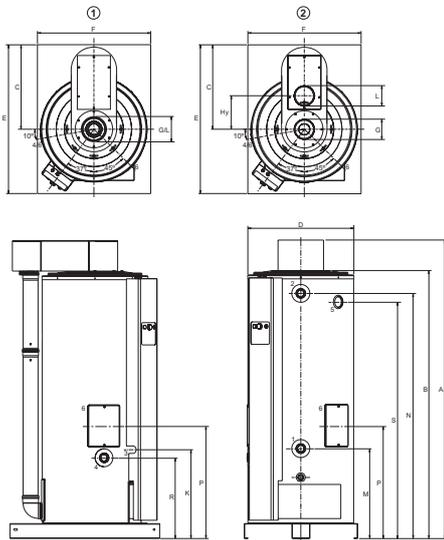

Commercial balanced fanned flue

SDV commercial water heaters are sealed combustion units that draw all primary air and secondary air from outside the building. They are a cost effective solution for applications where conventional flue systems are not possible or practical. Storage capacities range from 253 to 309 litres with heating inputs from 32.2 - 127.7 kW.

- Vertical or horizontal flue kit included
- Stainless steel burners
- Fully automatic spark ignition
- Multiple thermostat system - control, high limit & ECO
- Frost protection control
- Voltage free contact
- Electrolytic protection - magnesium anodes
- Dual clean out inspection ports
- Fixed steel base for easy installation
- LPG conversion kit
- Suitable for vented (open) or unvented (sealed) systems

Optional accessories

- Flue extension material
- Time clock control
- External ON/OFF
- Unvented system kit
- Powered anodes
- Temperature & pressure relief valve

SOF

Commercial oil fired + gas fired

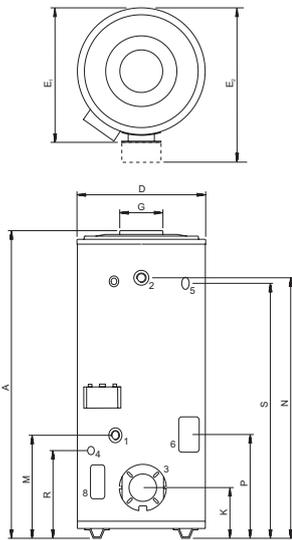

SOF oil fired water heater range combines high input and low storage to economically meet large hot water demands. All units are equipped with a precision designed Riello burner, which assures a high rate of combustion efficiency and minimal operating noise levels. The Riello burners are also suitable for 28 and 35-second light fuel oil. The range includes a selection of 6 models with heat inputs up to 201 kW.

- High efficient Riello burner
- Simply & easily accessible controls
- Ceramic fiber combustion chamber
- Independent safety controls
- Flame observation port
- Electrolytic protection - magnesium anodes
- Clean out inspection port
- Suitable for vented (open) or unvented (sealed) systems

Optional accessories

- Unvented system kit
- Temperature & pressure relief valve

PRV

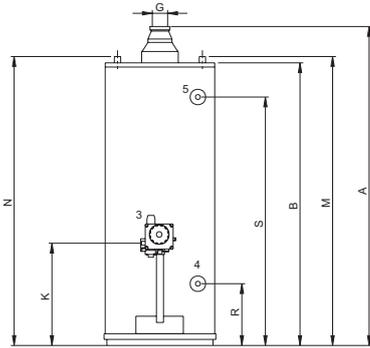

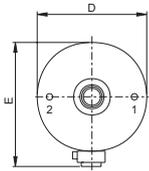

Residential conventional flue

PRV direct-fired water heaters are a cost effective solution for residential hot water demands. The units are equipped with a high efficient burner and baffle design that insures fast recovery times and economical hot water production. The range includes 3 models with storage capacities from 109 to 181 litres and heat inputs up to 18 kW.

- Multi port stainless steel burner
- Piezo igniter
- Control & ECO thermostats
- Thermal reflux safety flue system (TRS)
- Electrolytic protection - magnesium anode
- Draft diverter
- LPG conversion kit
- Suitable for vented (open) or unvented (sealed) systems

Optional accessories

- Unvented system kit
- Solenoid control kit
- Temperature & pressure relief valve

Indirect applications

HEAT EXCHANGERS

Our heat exchangers ensure optimal heat transfer and maximum energy-efficiency from the installation. Depending on the intended use, storage tanks are available with either one or two internally mounted heat exchangers.

PLATE HEAT EXCHANGERS

Single and double-separated soldered copper plate heat exchangers in a power range from 50 - 275 kW are available for applications in combination with SVT storage tanks. Matching insulation jackets are obtainable for the entire range of plate heat exchangers.

On special request, custom tanks are available with a larger capacity (up to 30.000 litres).

APPLICATIONS

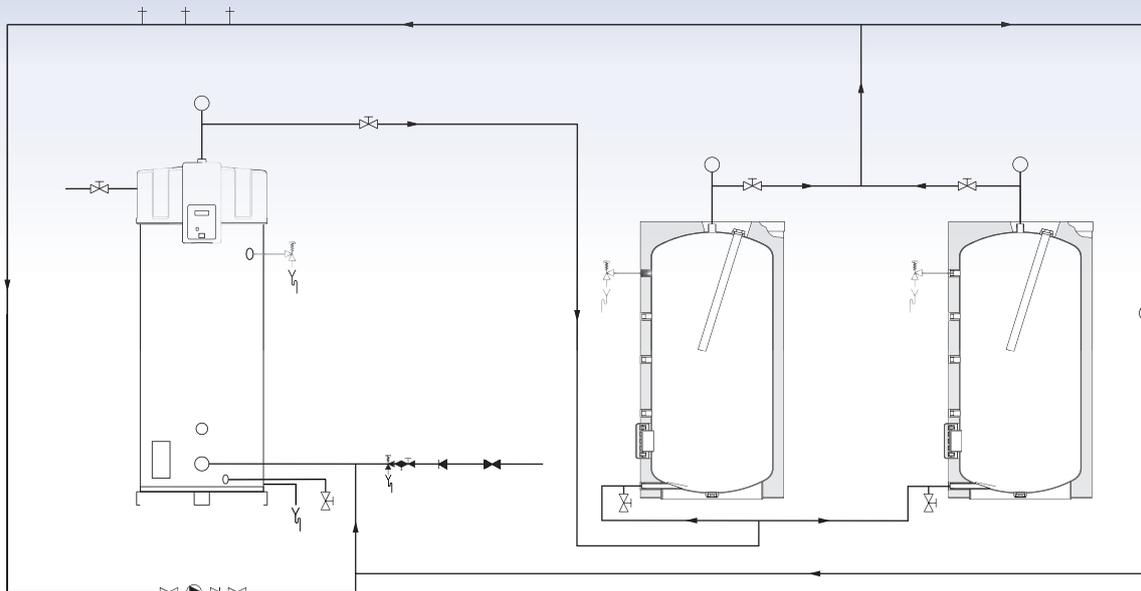

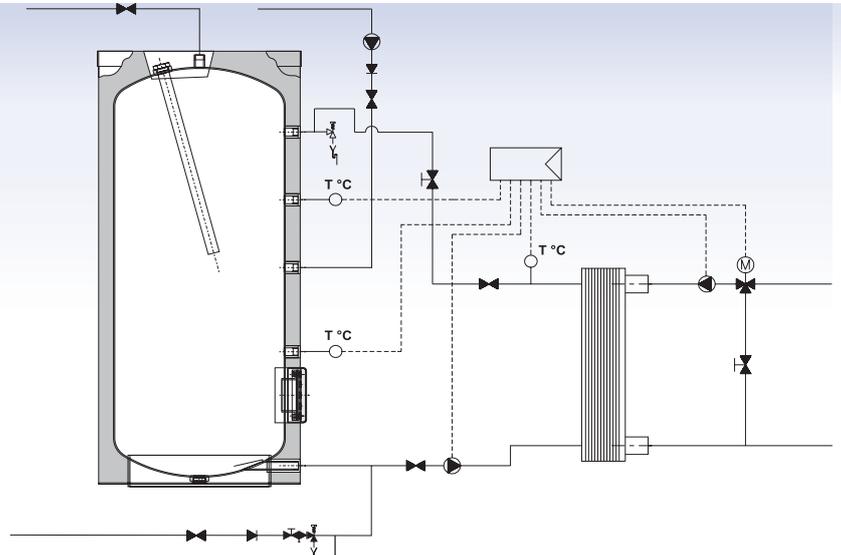

The product range of indirect appliances consists of a storage tank, a storage tank with 1 heat exchanger, a storage tank with 2 heat exchangers and a plate heat exchanger. All our products are available in various output ranges and capacities. This makes each one suited to several configurations and installations.

As shown in the chapter Thermal solar energy, the SIT and SID are well-suited for use in combination with gas/solar water heaters. In the case of an existing installation, the SIT and the SID can also be used to add solar energy to the installation.

To convert a CH system into a system that provides heat & hot water, a plate heat exchanger combined with a SVT storage tank can be helpful. Connected to the CH installation, the copper plate heat exchanger and SVT can contribute to the hot water requirements.

This allows for an optimal use of the CH capacity and with a simple adjustment, all water heating needs can be fulfilled.

Gas-fired appliances can also be combined with storage tanks. With these tanks, hot water can be buffered and stored for an expected peak. With one or more SVT's the selected water heater can be installed to match the draw-off demand.

SIT

Commercial indirect tanks

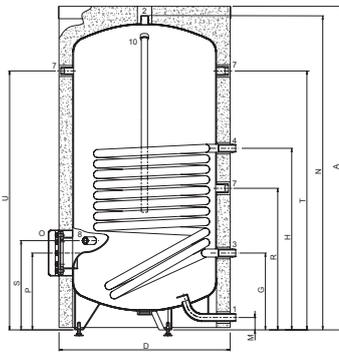

SIT range of commercial indirect storage tanks are suitable for installations with a variety of heat sources. The units are manufactured with heavy gauge steel and protected from corrosion by an advanced glass lining process. Storage capacities range from up to 2800 litres with heating outputs from 46 - 142 kW.

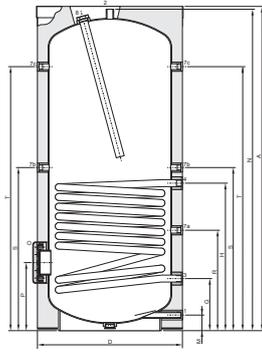

- Glass lined steel tank
- Coil surface area (1.5 - 4.8 m²)
- Electrolytic protection - magnesium anode
- Removable polyurethane soft foam insulation jacket
- Clean out inspection port
- Maximum tank working pressure 10 Bar
- Tank operation temperatures up to 95°C
- Coil operation temperature up to 110°C
- Suitable for vented (open) or unvented (sealed) systems

Optional accessories

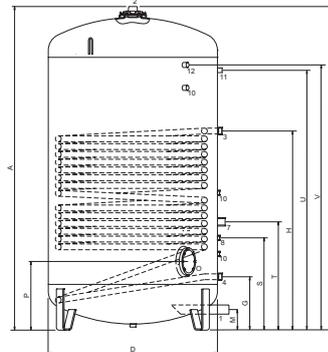

- Temperature meter
- Unvented system kit
- Temperature & pressure relief valve
- Electric heating elements up to 7.5 kW
- Flexible magnesium anode
- Powered anodes

SID

Commercial dual coil indirect tanks

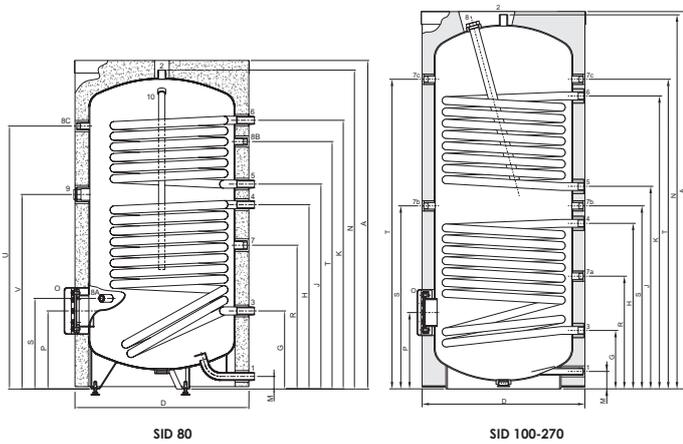

SID range of dual coil indirect storage tanks are suitable for installations with solar and other heat recovery systems. The units are manufactured with heavy gauge steel and protected from corrosion by an advanced glass lining process. The range includes a selection of 6 models with capacities from 289 to 1007 litres.

- Glass lined steel tank with two coils
- Output primary coil 27 - 58 kW
- Output secondary coil 46 - 87 kW
- Electrolytic protection - magnesium anode
- Removable polyurethane soft foam insulation jacket
- Clean out inspection port
- Maximum tank working pressure 10 Bar
- Tank operation temperatures up to 95°C
- Coil operation temperature up to 110°C
- Suitable for vented (open) or unvented (sealed) systems

Optional accessories

- Temperature meter
- Unvented system kit
- Temperature & pressure relief valve
- Electric heating elements up to 7.5 kW

SVT

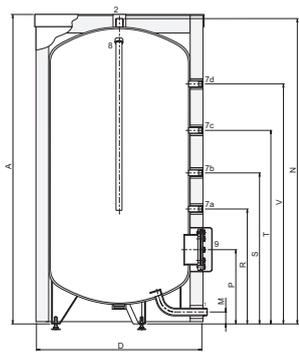

Commercial storage tanks

SVT storage tanks are ideal for use with direct-fired water heaters when extra storage is required to meet high peak demands. The units are manufactured with heavy gauge steel and coated with an exclusive corrosion resistant glass lining, which is fused to the steel by firing at a temperature of 860°C. The range includes 10 different models with storage capacities up to 1055 litres.

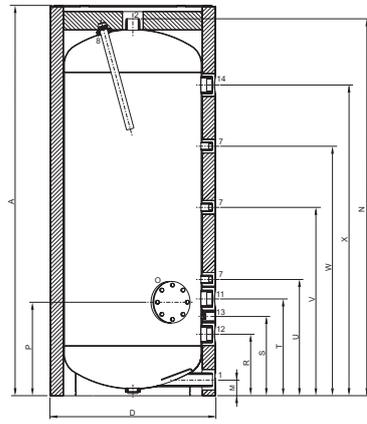

- Glass lined steel tank
- Electrolytic protection - magnesium anode
- Removable polyurethane soft foam insulation jacket
- Clean out inspection port
- Maximum working pressure 10 Bar
- Operation temperatures up to 95°C
- Suitable for vented (open) or unvented (sealed) systems

Optional accessories

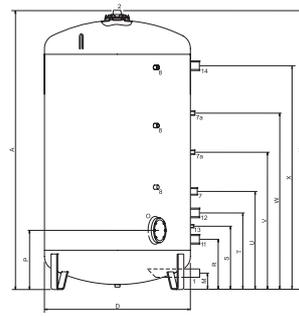

- Temperature meter
- Unvented system kit
- Temperature & pressure relief valve

Concentric flues

It is **not** permitted to use more than the specified number of bends, even when the duct is shorter than the maximum length. A 45° bend is equivalent to a 90° bend.

Parallel flues

- The maximum permissible length should be reduced by the equivalent length of each bend. (Note: for a parallel installation this means that 3 changes in direction amount to 6 bends (3 in the supply duct and 3 in the flue).
- The maximum length also applies if a parallel installation has different supply and flue duct lengths (B23, C53).
- Combined flues(C43) shall be fitted with a condensate drain.

Note: horizontal flue runs must be installed with a fall of at least 5 mm per metre.

* All SUF are also approved for installations where the unit is supplied without venting materials (C63).

Flue options SDV

A SDV water heater should be installed according category C13 or C33.

INSTALLATION OPTIONS SDV

Max. length (m)	7	7	7	7	7
Max. 45/90° bends	2	2	2	2	2

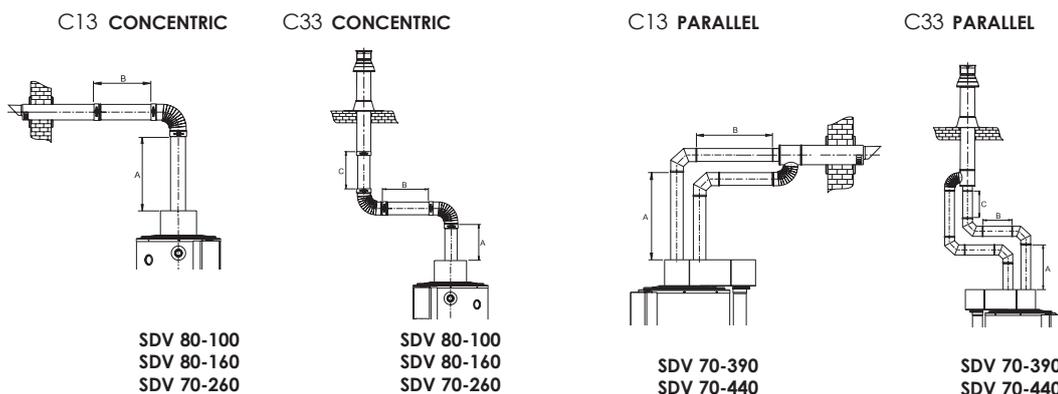

Concentric flues

It is **not** permitted to use more than the specified number of bends, even when the duct is shorter than the maximum length. A 45° bend is equivalent to a 90° bend.

Parallel flues

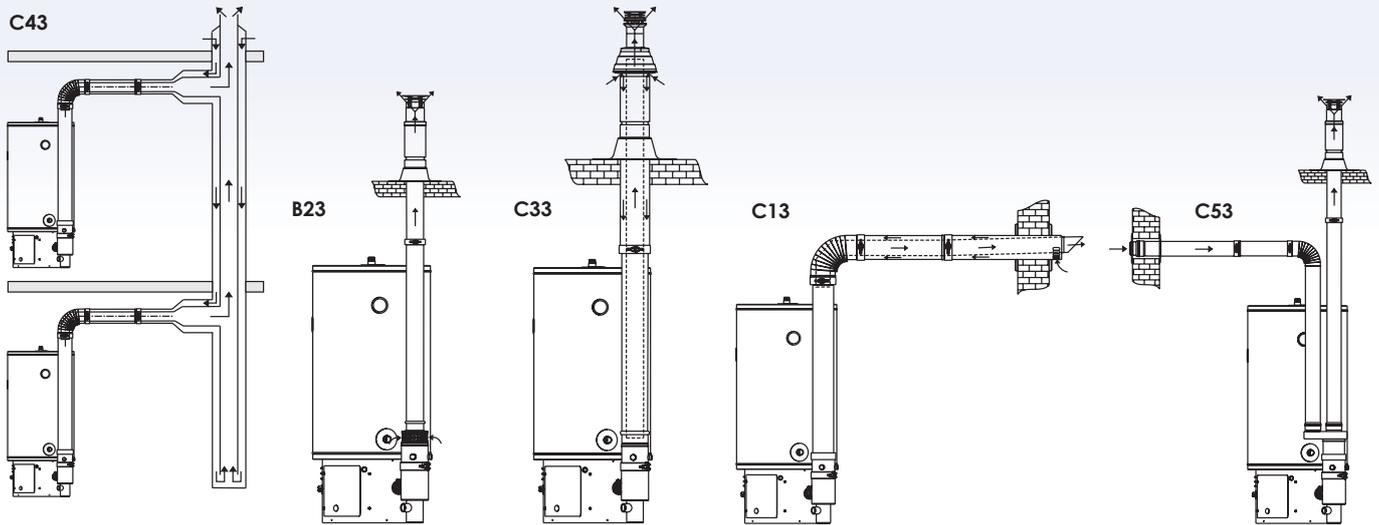

The parallel flue of a SDV 70-390 or 70-440 unit should always be connected to the wall or roof duct using the standard transition piece (0306801). The two ducts shall **not** terminate in different pressure zones.

Note: horizontal flue runs must be installed with a fall of at least 5 mm per metre.

Flue options

Flue options SXP

A SXP water heater should be installed according category B23, C13, C33, C43 or C53*.
